Handbook of Research on Innovations in Non-Traditional Educational Practices Keengwe, Jared, 2020-12-11 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers factory workers or reliant on learning in a classroom there are bursts of promising practices that buck the norm by questioning the educational value of these traditions Though researchers have investigated the potential of students learning in their own homes via personalized instruction delivered by computers rather than attending traditional institutions the status quo in education has remained stubbornly resistant to change Mixed reality simulations year round schooling grouping students by competencies instead of age and game based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era The Handbook of Research on Innovations in Non Traditional Educational Practices is a comprehensive reference source that examines various educational innovations how they have developed

workarounds to navigate traditional systems and their potential to radically transform teaching and learning. It is intended for academicians, professionals, administrators, and researchers in education and specifically benefits academic deans, vice presidents of academic affairs, graduate students, faculty, technology leaders, directors of teaching and learning centers, curriculum and instructional designers, policymakers, principals, and superintendents and teachers interested in educational change.

Harnessing Public Research for Innovation in the 21st Century Anthony Arundel, Suma Athreye, Sacha Wunsch-Vincent, 2021-03-04 Universities and public research institutes play a key role in enabling the application of scientific breakthroughs and innovations in the marketplace. Many countries, developed and developing alike, have implemented national strategies to support the application or commercialization of knowledge produced by public research organizations. Universities and public research institutes have introduced practices to support these activities, for instance by including knowledge transfer to promote innovation as a core part of their mission. As a result, a vital question for policymakers is how to improve the efficiency of these knowledge transfer practices to help maximize innovation-driven growth and/or to seek practical solutions to critical societal challenges. This book aims to develop a conceptual framework to evaluate knowledge transfer practices and outcomes, to improve knowledge transfer metrics, surveys, and evaluation frameworks, and to generate findings on what works and what does not, and to propose related policy lessons. This book is also available as Open Access.
