**Zoomland** Florentina Armaselu, Andreas Fickers, 2023-12-31 Despite a variety of theoretical and practical undertakings there is no coherent understanding of the concept of scale in digital history and humanities and its potential is largely unexplored. A clearer picture of the whole spectrum is needed from large to small distant to close global to local general to specific macro to micro and the in between levels. The book addresses these issues and sketches out the territory of Zoomland at scale. Four regions and sixteen chapters are conceptually and symbolically depicted through three perspectives: bird's eye, overhead and ground view. The variable scale representation allows for exploratory paths covering areas such as theoretical and applicative reflections on scale combining a digital dimension with research in history, media studies, cultural heritage, literature, text analysis and map modelling, creative use of scale in new digital forms of analysis, data organisation, interfaces and argumentative or artistic expressions. Zoomland provides a systematic discussion on the epistemological dimensions, hermeneutic methods, empirical tools and aesthetic logic pertaining to scale and its innovative possibilities residing in humanities based approaches and digital technologies. Enter the Zoomland game [here](#) or watch the [teaser](#).

**Visualizing History's Fragments** Ashley R. Sanders, 2024-06-19 This book combines a methodological guide with an extended case study to show how digital research methods can be used to explore how ethnicity, gender and kinship shaped early modern Algerian society and politics. However, the approaches presented have applications far beyond this specific study. More broadly, these methods are relevant for those interested in identifying and studying relational data, demographics, politics, discourse, authorial bias and social networks of both known and unnamed actors. Ashley R. Sanders explores how digital research methods can be used to study archival specters: people who lived, breathed and made their mark on history but whose presence in the archives and extant documents remains limited at best, if not altogether lost. Although digital tools cannot metaphorically resurrect the dead nor fill archival gaps, they can help us excavate the people-shaped outlines of those who might have filled these spaces. The six methodological chapters explain why and how each research method is used, present the visual and quantitative results and analyze them within the context of the historical case study. In addition, every dataset is available on SpringerLink as Electronic Supplementary Material (ESM) and each chapter is accompanied by one or more video tutorials that demonstrate how to apply each of the techniques described, accessed via the SN More Media App.
