**Gradient Techniques in Preparative Chromatography** Dorota Antos,2003      **Gradient Techniques in Preparative Chromatography** Dorota Antos,2009-09 Chromatographic separations are usually realized in isocratic mode i e with constant temperature pressure or solvent composition of the mobile phase during the process However it is well known that the adsorption behavior of the system can be strongly affected by changes of these operating parameters in gradient mode In the work presented here several aspects of applying the gradient technique for preparative scale of both batch and continuous chromatography are discussed This analysis is included in the main PART II of the work It starts from the examination of a batch system consisting of a single column Subsequently strategies of using gradient in a continuous separation with a parallel multi column arrangement and with the SMB system are discussed Before analyzing the gradient technique the application of mathematical models of process dynamics for predicting chromatographic separations is thoroughly examined in PART I of the work Moreover in PART I several aspects of the application of numerical methods for solving the model equations are discussed      Nuclear Science Abstracts ,1971      **Dissertation Abstracts International** ,1996      **Energy Research Abstracts** ,1985      **Energy Research Abstracts** ,1985 Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information      **Index to Scientific & Technical Proceedings** ,1979-07 Monthly with annual cumulation Published conference literature useful both as current awareness and retrospective tools that allow searching by authors of individual papers as well as by editors Includes proceedings in all formats i e books reports journal issues etc Complete bibliographical information for each conference proceedings appears in section titled Contents of proceedings with accompanying category permutterm subject sponsor author editor meeting location and corporate indexes Contains abbreviations used in organizational and geographical names      High-Performance Gradient Elution Lloyd R. Snyder,John W. Dolan,2007-01-09 Gradient elution demystified Of the various ways in which chromatography is applied today few have been as misunderstood as the technique of gradient elution which presents many challenges compared to isocratic separation When properly explained however gradient elution can be less difficult to understand and much easier to use than often assumed Written by two well known authorities in liquid chromatography High Performance Gradient Elution The Practical Application of the Linear Solvent Strength Model takes the mystery out of the practice of gradient elution and helps remove barriers to the practical application of this important separation technique The book presents a systematic approach to the current understanding of gradient elution describing theory methodology and applications across many of the fields that use liquid chromatography as a primary analytical tool This up to date practical and comprehensive treatment of gradient elution Provides specific step by step recommendations for developing a gradient separation for any sample Describes the best approach for troubleshooting problems with gradient methods Guides the reader on the equipment used for gradient elution Lists which conditions should be varied first during method development

and explains how to interpret scouting gradients Explains how to avoid problems in transferring gradient methods With a focus on the use of linear solvent strength LSS theory for predicting gradient LC behavior and separations by reversed phase HPLC High Performance Gradient Elution gives every chromatographer access to this useful tool     **Mathematical**

**Modeling for Preparative Chromatography** Georges Guiochon, Bingchang Lin, 2003-05-19 Nonlinear chromatography is a field that borders both chemical engineering and physical chemistry In turn the theory of nonlinear chromatography is the foundation of preparative chromatography a separation process that has lately become of considerable interest in the pharmaceutical industry Only chromatography is sufficiently flexible and powerful to satisfy the practical requirements encountered in most difficult separations of pharmaceuticals and pharmaceutical intermediates Since nonlinear behaviour is strictly a mathematical concept it is difficult to leave mathematics out of any fundamental study of nonlinear chromatography Therefore Modeling for Preparative Chromatography will describe the different mathematical models of chromatography examine the assumptions on which they are based consider their properties and discuss their solutions All this will be done from a mathematical analysis point of
