This book constitutes the refereed proceedings of the 9th International Colloquium on Grammatical Inference ICGI 2008 held in Saint Malo France in September 2008. The 21 revised full papers and 8 revised short papers presented were carefully reviewed and selected from 36 submissions. The topics of the papers presented vary from theoretical results of learning algorithms to innovative applications of grammatical inference and from learning several interesting classes of formal grammars to applications to natural language processing. *Grammatical Inference: Algorithms and Applications* Pieter Adriaans, Henning

Fernau, Menno van Zaanen, 2002-09-11. The Sixth International Colloquium on Grammatical Inference ICGI2002 was held in Amsterdam on September 23-25th 2002. ICGI2002 was the sixth in a series of successful biennial international conferences on the area of grammatical inference. Previous meetings were held in Essex U.K., Alicante Spain, Montpellier France, Ames Iowa USA, Lisbon Portugal. This series of meetings seeks to provide a forum for the presentation and discussion of original research on all aspects of grammatical inference. Grammatical inference, the process of inferring grammars from given data, is a field that not only is challenging from a purely scientific standpoint but also finds many applications in real world problems. Despite the fact that grammatical inference addresses problems in a relatively narrow area, it uses techniques from many domains and is positioned at the intersection of a number of different disciplines. Researchers in grammatical inference come from fields as diverse as machine learning, theoretical computer science, computational linguistics, pattern recognition, and artificial neural networks. From a practical standpoint, applications in areas like natural language acquisition, computational biology, structural pattern recognition, information retrieval, text processing, data compression, and adaptive intelligent agents have either been demonstrated or proposed in the literature. The technical program included the presentation of 23 accepted papers out of 41 submitted. Moreover, for the first time, a software presentation was organized at ICGI. Short descriptions of the corresponding software are included in these proceedings too. **Grammatical Inference** Pieter Adriaans, Henning Fernau, Menno van

Grammatical Inference Wojciech Wieczorek, 2016-10-25 This book focuses on grammatical inference presenting classic and modern methods of grammatical inference from the perspective of practitioners To do so it employs the Python programming language to present all of the methods discussed Grammatical inference is a field that lies at the intersection of multiple disciplines with contributions from computational linguistics pattern recognition machine learning computational biology formal learning theory and many others div Though the book is largely practical it also includes elements of learning theory combinatorics on words the theory of automata and formal languages plus references to real world problems The listings presented here can be directly copied and pasted into other programs thus making the book a valuable source of ready recipes for students academic researchers and programmers alike as well as an inspiration for their further development

Syntactic And Structural Pattern Recognition - Theory And Applications Horst Bunke, Alberto Sanfeliu, 1990-01-01 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read

individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book
