Hadron Physics I.J. Douglas MacGregor, Ralf Kaiser, 2006-07-07 Straddling the traditional disciplines of nuclear and particle physics hadron physics is a vital and extremely active research area as evidenced by a 2004 Nobel prize and new research facilities such as that scheduled to open at CERN Scientifically it is of vital importance in extrapolating our knowledge of quark gluon physics at the sub nucleon level to provide a wider perspective of strongly interacting hadrons which make up the vast bulk of known matter in the Universe Through detailed pedagogical chapters contributed by key international experts Hadron Physics maps out our contemporary knowledge of the subject It covers both the theoretical and experimental aspects of hadron structure and properties along with a wide range of specific research topics results and applications Providing a full picture of activity in the field the book highlights three particular areas of current research computational lattice hadron physics the structure and dynamics of hadrons and generalized parton distributions It provides a solid introduction includes background theory and presents the current state of understanding of the subject

Hadron Physics 98, Topics On The Structure And Interaction Of Hadronic Systems Sidney Dos Santos Avancini, Erasmo Ferreira, Frederico F De Souza Cruz, 1999-07-05 The study of QCD in the confinement regime poses some of the most difficult problems of fundamental physics at present The mechanism of confinement itself is not described formally and it is hard to investigate the properties of the fundamental theory in the determination of the structures and interactions

of hadronic systems The strong coupling and the extreme non linearity of the theory severely limit the applicability and the extension and generalization of models and methods The area of particle nuclear physics called Hadron Physics deals with the phenomena determined by the confinement regime of QCD The International Workshop on Hadron Physics 98 aimed to provide a framework for the comparative evaluation of different approaches to the difficult problems of QCD and gathered together experts who have been leading developments in hadronic physics in recent years As a central feature of the workshop program there were four sets of lectures 1 An Introduction to Effective Field Theory J F Donoghue 2 Non perturbative QCD A Di Giacomo 3 Diffraction Past Present and Future E Predazzi QCD at High Temperature and Density T Hatsuda These courses provided a pedagogical and updated account of the recent developments that gave support to the discussion of frontier research problems The lecturers did very useful work in the review and description of important lines of research The lectures are reproduced in this book together with invited talks and contributed papers dealing with specific research problems for the use and appreciation of a wider audience
