*International Relations* Manuela Spindler, 2013-04-10 The book is written for active learners those keen on cutting their own path through the complex and at times hardly comprehensible world of THEORY in International Relations To aid this process as much as possible this book employs the didactical and methodical concept of integrating teaching and self study The criteria for structured learning about IR theory will be derived from an extensive discussion of the questions and problems of philosophy of science Part 1 Theory of IR refers to the scientific study of IR and covers all of the following subtopics the role and status of theory in the academic discipline of IR the understanding of IR as a science and what a scientific theory is the different assumptions upon which theory building in IR is based the different types of theoretical constructions and models of explanations found at the heart of particular theories and the different approaches taken on how theory and the practice of international relations are linked to each other The criteria for the structured learning process will be applied in Part 2 of the book during the presentation of five selected theories of International Relations The concept is based on learning through example that is the five theories have been chosen because when applying the criteria developed in Part 1 of the book each single theory serves as an example for something deeply important to learn about THEORY of IR more generally *A History of World Societies, Volume C: 1775 to the Present* John P. **in the Discipline of International Relations** David Long,Brian C. Schmidt,2006-01-01 What were the guiding themes of  
 the discipline of International Relations before World War II The traditional disciplinary history has long viewed this time  
 period as one guided by idealism and then challenged by realism This book reconstructs in detail some of the formative  
 episodes of the field s early development and arrives at the conclusion that in actuality the early years of International  
 Relations were preoccupied not with idealism and realism but with the dual themes of imperialism and internationalism Thus  
 the beginnings of the discipline have resonance with the recently revived discourse of empire and the global status and  
 policies of the United States as the world s sole superpower *The Industrial Revolution* James Wolfe,2015-07-15 The  
 Industrial Revolution has had the most far reaching and transformative effects of any era in the planet s history After  
 detailing life and technology in Europe prior to the revolution this volume presents the changes that led to the revolution  
 important inventions and innovations societal and economic consequences and the Second Industrial Revolution in the  
 United States Readers will learn how inventions we take for granted today such as the telephone steam engine and railroad  
 transformed our world and started us on the path to globalization *Asian Forms of the Nation* Stein Tonnesson,Hans

Antlov,2013-10-23 The general tendency among theorists in nationalism and national identity has been to assume that the modernization process in Asia and Africa is a kind of distorted reflection of a Western precedent Asian forms of the nation have rarely been seen as independent alternative models Among today s leading theoreticians there is a growing tendency to take Asia seriously and to include Asian examples in the general discussion The aim of the present collection is to build on and reinforce this tendency It does not postulate any specifically Asian form of the nation as opposed to a Western one Rather it seeks to demonstrate that in Asia as well as in Europe each nation forms a unique amalgam which can be compared fruitfully with others History culture and geography have posed various kinds of limits to what can be imagined as Benedict Anderson puts it The relationship between geographical space and national construction is explored in depth here
