Cumulated Index Medicus, 1976 **Living with Little Monsters** Michaela van den Honert, Pieter Gouws, Michael J Lee, 2022-07-18 The tragic coronavirus pandemic of 2020 2022 opened the world's eyes anew to the urgent need for a better understanding of microorganisms whether viruses or bacteria in order to develop best practices for reducing the risk of dangerous infections Ideally every household should have sufficient knowledge of how viruses and other kinds of microorganisms can damage human and animal health Now with exquisite timing Prof Pieter Gouws at the Centre for Food Safety CFS in the Department of Food Science at Stellenbosch University and food scientist Dr Michaela van den Honert have collaborated on a scientific household guide for living with little monsters introducing the reader to an array of potentially harmful microorganisms Nor

have the authors neglected the bacteria which play a positive role for example in the human gut They have gathered the latest scientific evidence for an extensive set of descriptions of specific microbes to watch out for and how best to minimise the risk of being infected by them By so doing they can empower ordinary consumers along with their families to live healthier less risky daily lives

How to Fight Harmful Microbial Bugs and Superbugs? Alain Fischer,Michel Goldman,Paul-Henri Lambert,2021-09-01 The evolution of human beings has been shaped to a large extent by microbes A number of microbes are innocuous or even contribute to our health equilibrium This is the case of bacteria and viral phages present in our gut However several bacteria viruses parasites and fungi are damaging our bodies causing a number of acute and chronic diseases Until recently these bugs represented the main causes of death Better hygiene vaccines antibiotics and other anti microbial drugs have resulted in a better control or cure of many infections

However malaria tuberculosis and AIDS still represent major threats in several countries and the recent epidemics of Ebola and Zika demonstrate how vulnerable we are to newly emerging viruses Furthermore diarrhea and pneumonia caused by bacteria or viruses still kill millions of children worldwide Most importantly bacteria resistant to existing antibiotics are multiplying at a high pace and these superbugs are expected to kill more and more people in the coming years Clearly we need to develop more effective approaches to tackle bugs and superbugs Better hygiene and better vaccine coverage must be considered first and education of kids is essential in this respect This is the main objective of this series of papers published in Frontiers for Young Minds under the heading How to Fight Harmful Microbial Bugs and Superbugs Another key objective of the collection is to elicit the interest of children for research on innovative anti microbial therapies and vaccines
