most impressive non technical account available and a fascinating introduction to the subject for laymen An uncommonly good study Pierce s volume presents the most satisfying discussion to be found Scientific American      **Science and Information Theory** Leon Brillouin,2013-07-17 Classic source for exploring connections between information theory and physics Geared toward upper level undergraduates and graduate students Applies principles of information theory to Maxwell s demon thermodynamics and measurement problems 1962 edition      *Information Theory* Stanford Goldman,1953

*Information Theory* Marcelo S. Alencar,2014-11-30 During the last decade we have witnessed rapid developments of computer networks and Internet technologies along with dramatic improvements in the processing power of personal computers These developments make Interactive Distance Education a reality By designing and deploying distributed and collaborative applications running on computers disseminated over the Internet distance educators can reach remote learners overcoming the time and distance constraints Besides the necessary theoretical base provided by lectures and written materials hands on experience provided by physical laboratories is a vital part for engineering education It helps engineering students become effective professionals Such instruction not only provides the students with the knowledge of the physical equipment but also adds the important dimension of group work and collaboration However laboratories are expensive to setup to maintain and provide long hours of daily staffing Due to budget limitations many universities and colleges can provide only limited access to such physical equipment Therefore it is imperative to enable remote access to a physical laboratory either as part of an on site or distance learning course      Perspectives on Logics for Data-driven Reasoning Hykel Hosni,Jürgen Landes,2025-01-21 This book calls for a rethinking of logic as the core methodological tool for scientific reasoning in the context of a steadily increasing emphasis on data centered science To do so it provides a state of the art presentation of the role logic can have in making the most of the current opportunities while making explicit the key challenges opened up by the data driven age of scientific research Particular attention is given to the following four core fields and applications Reasoning with correlations medical life science applications logics for statistical inference machine learning and societal applications thereof reasoning with evidence defining good evidence causal reasoning forensic reasoning The book collects contributions from key logicians methodologists and scientists This multidisciplinary perspective benefits both scientists and logicians interested in data driven science Scientists are introduced to logics that go beyond classical and thus are applicable to reasoning with data Logicians have a change to focus on the potential applications of their methods and techniques to pressing scientific problems This book is therefore of interest to scientists and logicians working on data centered science      *The Mystery of Market Movements* Niklas Hageback,2014-03-25 A quantifiable framework for unlocking the unconscious forces that shape markets There has long been a notion that subliminal forces play a great part in causing the seemingly irrational financial bubbles which conventional economic theory again and again fails to explain However these forces sometimes labeled animal spirits or irrational exuberance have remained elusive until now The

Mystery of Market Movements provides you with a methodology to timely predict and profit from changes in human investment behaviour based on the workings of the collective unconscious. Niklas Hageback draws in on one of psychology's most influential ideas: archetypes to explain how they form investor perceptions and can be predicted and turned into profit. The Mystery of Market Movements provides a review of the collective unconscious and its archetypes based on Carl Jung's theories and empirical case studies that highlights and assesses the influences of the collective unconscious on financial bubbles and zeitgeists. For the first time being able to objectively measure the impact of archetypal forces on human thoughts and behaviour with a view to provide early warning signals on major turns in the markets. This is done through a step by step guide on how to develop a measurement methodology based on an analysis of the language of the unconscious figurative speech such as metaphors and symbolism drawn out and deciphered from Big Data sources allowing for quantification into time series. The book is supplemented with an online resource that presents continuously updated bespoke archetypal indexes with predictive capabilities to major financial indexes. Investors are often unaware of the real reasons behind their own financial decisions. This book explains why psychological drivers in the collective unconscious dictates not only investment behaviour but also political cultural and social trends. Understanding these forces allows you to stay ahead of the curve and profit from market tendencies that more traditional methods completely overlook.

**Model Calibration and Parameter Estimation** Ne-Zheng Sun, Alexander Sun, 2015-07-01 This three part book provides a comprehensive and systematic introduction to these challenging topics such as model calibration parameter estimation reliability assessment and data collection design. Part 1 covers the classical inverse problem for parameter estimation in both deterministic and statistical frameworks. Part 2 is dedicated to system identification hyperparameter estimation and model dimension reduction and Part 3 considers how to collect data and construct reliable models for prediction and decision making. For the first time topics such as multiscale inversion stochastic field parameterization level set method machine learning global sensitivity analysis data assimilation model uncertainty quantification robust design and goal oriented modeling are systematically described and summarized in a single book from the perspective of model inversion and elucidated with numerical examples from environmental and water resources modeling. Readers of this book will not only learn basic concepts and methods for simple parameter estimation but also get familiar with advanced methods for modeling complex systems. Algorithms for mathematical tools used in this book such as numerical optimization automatic differentiation adaptive parameterization hierarchical Bayesian metamodeling Markov chain Monte Carlo are covered in details. This book can be used as a reference for graduate and upper level undergraduate students majoring in environmental engineering hydrology and geosciences. It also serves as an essential reference book for professionals such as petroleum engineers mining engineers chemists mechanical engineers biologists biology and medical engineering applied mathematicians and others who perform mathematical modeling.
