As a developer, you need to know just one programming language to build an application that can be executed anywhere, be it the server console, browser, or on your mobile phone. This course begins with explaining how Node.js works and what its architecture is all about. You will then learn to create your first Node.js application and also create a command line tool for Node.js. Next, you will learn how to work with *commander.js* and use the event emitter because events are a powerful extension that can be used in our application. The course will then teach you to use and define streams and transformers, after which you will be skilled to build a web server with *Express.js*. This will be followed by taking you through how to read, write, and manipulate files in the file system with Node.js. You will even learn how to create microservices with the *loopback* API framework and *Seneca.js*, post which we will scale our Node.js application and test our code. Finally, you will complete your learning journey by using these APIs to create a web server, access file system, and create real-time interactions. With this course, you will be able to build your own tools along with big network and real-time applications. Resource description page **Mastering Node.js** David Wilson, 2019-04-11.
