This manual of problems was written as intended primarily as an aid to instructors teaching from the second volume of the Berkeley Physics Course. They will, I hope, find the material a useful supplement to the text. The solutions for the less routine problems often include some explanations giving beyond the bare requirements of the problem. The instructor would be well advised to prepare the solutions for the more routine problems before he assigns them -- if only to be warned of traps which were set advantage before the problems were devised.

The solutions were checked by Thomas Knight, who found some errors and made many valuable suggestions for improvement and clarification. Gary Ingraham who finds that the errors in his class would be improved if he revised that the author made some mistakes in working his own problems in order to be able to do so. Numerical errors may still turn up. Notice of errors would be most welcome, but would any other suggestion for improvement of the material be the same. Please address any suggestions to the author at Lyman Laboratory, Harvard University, Cambridge, Mass. 02138.

Appropriate parts of this manual may be detached and posted, or with copyright notice displayed, may be reproduced in part in members for the library. We do not, however, recommend that the entire manual be made available to students.
