 Yves Henrotin, Kim Bennell, Francois Rannou, 2012-03-31 Osteoarthritis is a chronic disease prevalent among the elderly Its
 most prominent feature is the progressive destruction of articular cartilage which results in impaired joint motion severe
 pain and ultimately disability Its prevalence and its impact on daily life pose a significant public health problem Today a cure
 for osteoarthritis remains elusive and the management of the disease is largely palliative focusing on the alleviation of
 symptoms Current recommendations include a combination of pharmacological and non pharmacological treatments The
 term non pharmacological includes physical therapy and rehabilitation but also nutraceuticals All guidelines on osteoarthritis
 management highlight the importance of weight loss and physical activity to improve the functional status of patients A
 number of alternative therapies are also commonly suggested by physicians and physiotherapists in their daily practice The
 efficacy of these therapies is not evidenced by strong clinical trials This category includes education information
 electrotherapy ultrasound electromagnetic field spa hydrotherapy acupuncture etc Non Pharmacological Therapies in the
 Management of Osteoarthritis reviews the clinical relevance of these therapies and the difficulties in conducting high quality
 trials assessing their efficacy This e book presents supportive scientific evidence for their efficacy and explains the
 mechanism of action of nutraceuticals targeting osteoarthritis It also includes many example of exercises mobilization and
 manipulation techniques directly useful for medical professionals **600 Practical Interview Questions and Answers for

Sharing Clinical Research Data Institute of Medicine, Board on Health Care Services, Board on Health Sciences Policy, Roundtable on Translating Genomic-Based Research for Health, National Cancer Policy Forum, Forum on Neuroscience and Nervous System Disorders, Forum on Drug Discovery, Development, and Translation, 2013-05-07 Pharmaceutical companies academic researchers and government agencies such as the Food and Drug Administration and the National Institutes of Health all possess large quantities of clinical research data If these data were shared more widely within and across sectors the resulting research advances derived from data pooling and analysis could improve public health enhance patient safety and spur drug development Data sharing can also increase public trust in clinical trials and conclusions derived from them by lending transparency to the clinical research process Much of this information however is never shared Retention of clinical research data by investigators and within organizations may represent lost opportunities in biomedical research Despite the potential benefits that could be accrued from pooling and analysis of shared data barriers to data sharing faced by researchers in industry include concerns about data mining erroneous secondary analyses of data and unwarranted litigation as well as a desire to protect confidential commercial information Academic partners face significant cultural barriers to sharing data and participating in longer term collaborative efforts that stem from a desire to protect intellectual autonomy and a career advancement system built on priority of publication and citation requirements Some barriers like the need to protect patient privacy present challenges for both sectors Looking ahead there are also a number of technical challenges to be faced in analyzing potentially large and heterogeneous datasets This public workshop focused on strategies to facilitate sharing of clinical research data in order to advance scientific knowledge and public health While the workshop focused on sharing of data from preplanned interventional studies of human subjects models and projects involving sharing of other clinical data

types were considered to the extent that they provided lessons learned and best practices The workshop objectives were to examine the benefits of sharing of clinical research data from all sectors and among these sectors including for example benefits to the research and development enterprise and benefits to the analysis of safety and efficacy Sharing Clinical Research Data Workshop Summary identifies barriers and challenges to sharing clinical research data explores strategies to address these barriers and challenges including identifying priority actions and low hanging fruit opportunities and discusses strategies for using these potentially large datasets to facilitate scientific and public health advances **Clinical**
