Governing The Climate New Approaches To Rationality Power And Politics:

Governing the Climate Johannes Stripple, Harriet Bulkeley, 2013 Climate change is an issue that transcends and exceeds formal political and geographical boundaries Social scientists are increasingly studying how effective policies on climate change can be enacted at the global level beyond the state Such perspectives take into account governance mechanisms with public hybrid and private sources of authority Studies are raising questions about the ways in which state authority is constituted and practiced in the climate arena and the implications for how we understand the potential and limits for addressing the climate problem This book focuses on the rationalities and practices by which a carbon constrained world is represented categorized and ordered The book will enable investigations into a range of sites e g the body home shopping centre firm city forests streets international bureaucracies financial flows migrants and refugees where subjectivities around climate change and carbon are formed and contested Despite a growing interest in this area of work the field remains fragmented and diffuse This edited collection brings together the leading scholarship in the field to cast new light on the question of how why and with what implications climate governance is taking place It is the first volume to collect this body of scholarship and provides a key reference point in the growing debate about climate change across the social sciences

Governing the Climate Johannes Stripple, Harriet Bulkeley, 2013-11-18 Despite a growing interest in critical social and political studies of climate change the field remains fragmented and diffuse This is the first volume to collect this body of scholarship providing a key reference point in the growing debate about climate change across the social sciences The book provides a new set of insights into the ways in which climate change is creating new forms of social order and the ways in which they are structured through the workings of rationality power and politics **Governing the Climate** is invaluable for three main audiences social science researchers and advanced students in the field of climate change the wider research community interested in global environmental politics and global environmental governance and policy makers and researchers concerned more broadly with environmental politics at international national and local levels

Governing the Climate Johannes Stripple, Harriet Bulkeley, 2014 The first volume on critical social and political studies of climate change for advanced students researchers and policy makers

Governing Climate Change Harriet Bulkeley, Peter Newell, 2023-05-05 This fully revised and expanded new edition provides a short and accessible introduction to how climate change is governed by an increasingly diverse range of actors from civil society and business actors to multilateral development banks donors and cities The issue of global climate change has risen to the top of the international political agenda Despite ongoing contestation about the science informing policy the economic costs of action and the allocation of responsibility for addressing the issue within and between nations it is clear that climate change will continue to be one of the most pressing and challenging issues facing humanity for many years to come The book Evaluates the role of states and non state actors in governing climate change at multiple levels of political organization local national and global Provides a

discussion of theoretical debates on climate change governance moving beyond analytical approaches focused solely on nation states and international negotiations Examines a range of key topical issues in the politics of climate change Includes multiple examples from both the north and the global south Providing an inter disciplinary perspective drawing on geography politics international relations and development studies this book is essential reading for all those concerned not only with the climate governance but with the future of the environment in general *The Politics of Urban Sustainability Transitions* Jens Stissing Jensen,Matthew Cashmore,Philipp Späth,2018-10-17 Cities the world over are increasingly recognised to be both a principal source of the environmental and social sustainability challenges facing contemporary society and a critical site for addressing these challenges Socio technical systems are at the heart of these challenges as they configure central aspects of urban life from mobility and energy infrastructures to leisure activities and patterns of mobility This observation has led to substantial interest in how societies might initiate and actively steer radical transitions in these systems in the pursuit of sustainable urban futures This book contributes to emerging debates on the politics of urban transitions by examining the intimate interlinkages between knowledge power and governance Drawing upon real world examples of urban governance the authors explore the strategies struggles and controversies involved in configuring knowledge and how knowledge constructions influence governance by rendering some concerns and issues visible and valuable while obscuring others The book draws attention to how novel ways of conceptualising knowing and observing socio technical systems may be harnessed productively in redefining the power relationships underpinning unsustainable practices Understanding these dynamics can ultimately inform and enable new approaches to support much needed urban transitions This book provides a compelling examination of urban knowledge politics for the twenty first century that will be of great value to academics policy makers and practitioners working in the social sciences urban studies geography urban governance or sustainability transitions **European Climate Diplomacy in the USA and China** Katrin Buchmann,2022-08-22 Buchmann analyses the work of UK German Danish and Swedish embassies in the USA and China on climate change in the late 2000s and early 2010s She relates which coalitions and narratives embassies sought to develop to convince China and the United States that a more progressive climate policy was possible to achieve gains supporting an agreement under the UNFCCC This book shows that a key interpretation of climate diplomacy was selling trade Europe selling technology solutions to solve climate change In this narrative Europe has already done what needs to be done and outsourcing of production to China e g is ignored In the USA embassies entered coalitions with states faith groups and the military arguing that a more progressive climate policy was mandated by either God or security concerns State politicians including Democrats often actually didn't implement any climate policies Any gains were reversed through climate denial lobbying funded by corporations Embassies did not address this **Rethinking the Green State** Karin Bäckstrand,Annica Kronsell,2015-06-12 This innovative book is one of the first to conduct a systematic comprehensive analysis of the ideals and practices of the evolving green state It

draws on elements of political theory feminist theory post structuralism governance and institutional theory to conceptualise the green state and advances thinking on how to understand its emergence in the context of climate and sustainability transitions Focusing on the state as an actor in environmental climate and sustainability politics the book explores different principles guiding the emergence of the green state and examines the performance of states and institutional responses to the sustainable and climate transitions in the European and Nordic context in particular The book s unique focus on the Nordic countries underlines the important to learn from Nordics which are perceived to be in the forefront of climate and sustainability governance as well as historically strong welfare states With chapter contributions from leading international scholars in political science sociology economics energy and environmental systems and climate policy studies this book will be of great value to postgraduate students and researchers working on sustainability transitions environmental politics and governance and those with an area studies focus on the Nordic countries

Retrofitting Cities Mike Hodson,Simon Marvin,2015-12-14 Developing an up to date critical framework for analysing urban retrofit this is the first book to examine urban re engineering for sustainability in a socio technical context Retrofitting Cities examines why retrofit is emerging as an important strategic issue for urban authorities and untangles the mix of economic competitive ecological and social drivers that influence any transition towards a more sustainable urban environment Retrofitting Cities comparatively explores how urban scale retrofitting can be conceptualised as a socio technical transition to critically compare and contrast different national styles of response in cities of the north and global south and to develop new research and policy agendas on future development of progressive retrofitting Bringing together a group of researchers from a variety of disciplinary backgrounds that reflect the complexity of the research challenge Retrofitting cities looks across different infrastructures and types of built environment dealing with diverse urban contexts and examining formal as well as community responses This is a uniquely practical book for urban planning and policy professionals as well as for researchers in urban studies and urban design

Routledge International Handbook of Sustainable Development Michael Redclift,Delyse Springett,2015-03-02 This Handbook gives a comprehensive international and cutting edge overview of Sustainable Development It integrates the key imperatives of sustainable development namely institutional environmental social and economic and calls for greater participation social cohesion justice and democracy as well as limited throughput of materials and energy The nature of sustainable development and the book s theorization of the concept underline the need for interdisciplinarity in the discourse as exemplified in each chapter of this volume The Handbook employs a critical framework that problematises the concept of sustainable development and the struggle between discursivity and control that has characterised the debate It provides original contributions from international experts coming from a variety of disciplines and regions including the Global South Comprehensive in scope it covers amongst other areas Sustainable architecture and design Biodiversity Sustainable business Climate change Conservation Sustainable consumption De growth Disaster management Eco system services Education

Environmental justice Food and sustainable development Governance Gender Health Indicators for sustainable development Indigenous perspectives Urban transport The Handbook offers researchers and students in the field of sustainable development invaluable insights into a contested concept and the alternative worldviews that it has fostered *Towards a Cultural Politics of Climate Change* Harriet Bulkeley, Matthew Paterson, Johannes Stripple, 2016-09-15 *Towards a Cultural Politics of Climate Change* provides a new perspective on how climate change matters in policy making business and everyday life It argues that the work of low carbon transitions takes place through the creation of devices the mobilisation of desires and the articulation of dissent Using case studies from the US Australia and Europe the book examines the creation and contestation of new forms of cultural politics of how a climate changed society is articulated realized and contested Through this approach it opens up questions about how where and by whom climate politics is conducted and the ways in which we might respond differently to this societal challenge This book provides a key reference point for the emerging academic community working on the cultural politics of climate change and a means through which to engage this new area of research with the broader social sciences **The Politics of Globality since 1945** Rens van Munster, Casper Sylvest, 2016-05-12 This timely comprehensive and interdisciplinary volume advances an original argument about the complex roots and multiple politics of globality It shows that technological innovations and decisive developments since 1945 from the nuclear revolution to anthropogenic climate change and debates about the Anthropocene have prompted reflections on the global condition of humanity and helped reshape political communities by making the world appear small manageable and interconnected The contributors stress how human beings have transformed both their habitat and their view of human earth relations since 1945 Such changes have been accompanied by important shifts in political visions prompted new forms of human association encouraged legal and institutional reform and spurred ideas about ecological humility At the same time the spatially all encompassing nature of globality have also informed projects of human mastery and a range of practices historically associated with militarization and a strongly statist conception of national security This volume reflects on these paradoxical relationships their history and contemporary relevance Contributing to the overlapping concerns of four burgeoning fields of study across the humanities and the social sciences globality and globalization studies geopolitics and political geography Anthropocene studies global governance and political theory the book will be of great use to scholars and graduates working in these areas *Life Adrift* Andrew Baldwin, Giovanni Bettini, 2017-05-24 *Life Adrift* critically engages with two of the most defining issues of our contemporary global political economy migration and climate change In their own right both are discrete areas of politics theory practice and resistance But as climate and migration are increasingly imagined together as a singular relation they are giving rise to new horizons of meaning in politics philosophy media art and literature *Life Adrift* is a collection of essays from across the interpretive social sciences and humanities which treats climate change and migration as a relation that demands theoretical and historical explanation rather than a problem requiring

technical and expert solutions The result is a unique collection offering readers a means for reconceptualising migration and environmental changes as a site of politics and of political possibility Along the way it addresses a range of topics current in cultural and political theory including democracy place neoliberalism humanism materiality borders affect race and sexuality If climate change stands to redistribute humans and material across the globe then Life Adrift offers a set of critical resources for analysing this coming phenomenon and reimagining what it might mean to be political in a fully immanent world of bodies in flux

The Politics of Carbon Markets Benjamin Stephan,Richard Lane,2014-08-27 The carbon markets are in the middle of a fundamental crisis a crisis marked by collapsing prices fleeing actors and ever increasing greenhouse gas levels Yet carbon trading remains at the heart of global attempts to respond to climate change Not only this but markets continue to proliferate particularly in the Global South The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets First the markets must be understood in relation to the politics involved in their development maintenance and opposition Second this politics is multiform and pervasive Implementation of new techniques and measuring tools policy development and contestation and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts This wide ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets climate change governance and environmental politics

Power and Politics in Sustainable Consumption Research and Practice Cindy Isenhour,Mari Martiskainen,Lucie Middlemiss,2019-03-04 With growing awareness of environmental deterioration atmospheric pollution and resource depletion the last several decades have brought increased attention and scrutiny to global consumption levels However there are significant and well documented limitations associated with current efforts to encourage more sustainable consumption patterns ranging from informational and time constraints to the highly individualizing effect of market based participation This volume featuring essays solicited from experts engaged in sustainable consumption research from around the world presents empirical and theoretical illustrations of the various means through which politics and power influence unsustainable consumption practices policies and perspectives With chapters on compelling topics including collective action behaviour change and the transition movement the authors discuss why current efforts have largely failed to meet environmental targets and explore promising directions for research policy and practice Featuring contributions that will help the reader open up politics and power in ways that are accessible and productive and bridge the gaps with current approaches to sustainable consumption this book will be of great interest to students and scholars of sustainable consumption and the politics of sustainability

Accomplishing Climate Governance Harriet Bulkeley,2015-09-25 This book provides a new approach to thinking about the politics and geographies of climate governance It argues that in order to understand the nature and potential of the range of new responses to climate change

emerging at multiple scales we need to examine how governance is accomplished how it is undertaken practised and contested Through a range of case studies drawn from communities corporations and local government the book examines how climate change comes to be governed and made to matter as an issue with which diverse publics should be concerned It concludes that rather than seeking the solution to climate change once and for all we need to engage with the ways in which we can channel our intentions to ameliorate the climate problem to more progressive ends The book will be of interest to researchers advanced students and policy makers across the social sciences

Accomplishing Climate Governance

Harriet Bulkeley, 2016 This book provides original critical insights into climate politics and new directions for society's response for researchers advanced students and policy makers

The Will to Predict Eglė Rindzevičiūtė, 2023-05-15 In *The Will to Predict* Eglė Rindzevičiūtė demonstrates how the logic of scientific expertise cannot be properly understood without knowing the conceptual and institutional history of scientific prediction She notes that predictions of future population economic growth environmental change and scientific and technological innovation have shaped much of twentieth and twenty first century politics and social life as well as government policies Today such predictions are more necessary than ever as the world undergoes dramatic environmental political and technological change But she asks what does it mean to predict scientifically What are the limits of scientific prediction and what are its effects on governance institutions and society Her intellectual and political history of scientific prediction takes as its example twentieth century USSR By outlining the role of prediction in a range of governmental contexts from economic and social planning to military strategy she shows that the history of scientific prediction is a transnational one part of the history of modern science and technology as well as governance Going beyond the Soviet case Rindzevičiūtė argues that scientific predictions are central for organizing uncertainty through the orchestration of knowledge and action Bridging the fields of political sociology organization studies and history *The Will to Predict* considers what makes knowledge scientific and how such knowledge has impacted late modern governance

Multiplicity Justin Rosenberg, Milja Kurki, 2021-05-11 This volume takes up the idea of multiplicity as a new common ground for international theory bringing together 10 scholars to reflect on the implications of societal multiplicity for areas as diverse as nationalism ecology architecture monetary systems cosmology and the history of political ideas International relations IR it is often said has contributed no big ideas to the interdisciplinary conversation of the social sciences and humanities Yet this is an unnecessary silence for IR uniquely addresses a fundamental fact about the human world its division into a multiplicity of interacting social formations This feature is full of consequences for the very nature of societies and for social phenomena of all kinds And in recent years a research programme has emerged within IR to theorise these consequences of multiplicity and to trace how the effects of the international dimension extend into other fields of social life This book is a powerful indication of the contribution that IR may yet make to the human disciplines The chapters in this book were originally published as a special issue of Globalizations
