clinical and neuropsychological aspects of closed head injury in a manner that is equally intelligible to researchers interested in the effects of brain damage upon human behaviour and to practitioners who are responsible for the assessment management and rehabilitation of head injured patients This is the second edition of a book which was first published in 1990 and which has been extensively revised in the light of the subsequent research in the field The book begins by considering the epidemiology causes and structural neuropathology of closed head injury It then considers the impact of closed head injury on memory cognition language communication personality and social behaviour Finally it outlines the outcome the mechanisms of recovery and the prospects for rehabilitation
