Local Energy Autonomy Fanny Lopez, Margot Pellegrino, Olivier Coutard, 2019-07-30 In recent years interest for local energy production supply and consumption has increased in academic and public debates In particular contemporary energy transition discourses and strategies often emphasize the search for increased local energy autonomy a phrase which can refer to a diverse range of configurations both in terms of the spaces and scales of the local territory considered and in terms of what is meant by energy autonomy This book explores policies projects and processes aimed at increased local energy autonomy with a particular focus on their spatial infrastructural and political dimensions In doing so the authors Sabine Barles Bruno Barroca Guilhem Blanchard Benoit Boutaud Arwen Colell Gilles Debizet Ariane Debourdeau Laure Dobigny Florian Dupont Z lia Hampikian Sylvie Jaglin Allan Jones Raphael M nard Alain Nada Angela Pohlmann Cyril Roger Lacan Eric Vidalenc improve our understanding of the always partial and controversial processes of energy relocation that articulate forms of local metabolic self sufficiency socio technical decentralization and political empowerment Comprising fifteen chapters the book is divided into four parts Governance and Actors Urban Projects and Energy Systems Energy Communities and The Challenges of Energy Autonomy

Les territoires de l'autonomie énergétique Fanny Lopez, Margot Pellegrino, Olivier Coutard, 2019-09-01 L'intérêt pour la production l'approvisionnement et la consommation d'énergie locale grandit dans les débats universitaires et publics Les discours et les stratégies de transition énergétique mettent souvent l'accent sur la recherche d'une plus grande autonomie énergétique expression qui se réfère des configurations diverses tant en termes d'espaces urbains ruraux ou périphériques et d'échelles qu'en termes politiques Les territoires de l'autonomie énergétique explore les liens entre les formes de relocalisation production et consommation d'énergie les jeux d'acteurs sous-jacents et les usages de l'énergie affrènt ainsi que les interdépendances entre infrastructures de petite et de grande échelles Cet ouvrage explicite et analyse des processus souvent partiels et controversés de la relocalisation énergétique qui articulent des formes d'autosuffisance métabolique locale de décentralisation socio technique et de responsabilisation politique et se

Energy Autonomy Benoit Boutaud, 2022-09-21 Energy autonomy is an emerging concept that is as yet poorly identified in France It can mean taking ownership of certain issues related to energy its production or indeed becoming self sufficient and it can apply equally to individuals communities and buildings While there are numerous new developments renewable energies smart grids and self consumption it is becoming difficult to know what this idea of autonomy covers just as it is difficult to define independence and self sufficiency which are often associated with it However these three concepts are key to thinking about the energy system and deciding its future Covering distinct ideas they are often reduced to economic and productive factors This ambiguity in their meanings is responsible for the misunderstandings delusions and obstacles that hamper the implementation of the energy transition This book deconstructs the common idea of autonomy in favor of a set of more operational concepts It demonstrates that these ideas are not interchangeable but rather represent practical and constructive tools for action The world of energy is changing and therefore we must rethink energy autonomy

Cross-Border Renewable Energy Transitions Philippe Hamman, 2021-12-26 This book explores the intrinsically multiscale issue of renewable energy transition from a local national and transnational perspective and provides insights into current developments in the Upper Rhine Region that can serve as an international model Organised around the exploration of stakeholder issues the volume first describes a framework for public action and modelling and then articulates a triple complementary focus from the viewpoint of law economics and sociology This multidisciplinary approach is anchored in the social sciences but also explores the ways in which technological issues are increasingly debated in the implementation of the ecological transition With a focus on the Upper Rhine Region of France Germany and Switzerland the contributions throughout analyse how concrete regional projects emerge and whether they are carried out by local authorities private energy groups network associations or committed citizens From this it appears that real world energy transition modes can be best understood as permanent transactional processes involving institutional regulations economic levers and barriers and social interactions This book will be of interest to advanced students and scholars focusing on renewable energy transition stakeholder issues environment and sustainability studies as well as those who are interested in the methodological aspects of the social sciences especially within the fields of sociology law economy geography political science urbanism and planning
