Governing Lethal Behavior In Autonomous Robots:

Governing Lethal Behavior in Autonomous Robots Ronald Arkin, 2009-05-27 Expounding on the results of the author's work with the US Army Research Office DARPA the Office of Naval Research and various defense industry contractors *Governing Lethal Behavior in Autonomous Robots* explores how to produce an artificial conscience in a new class of robots humaneoids which are robots that can potentially perform more et [The Legality and Accountability of Autonomous Weapon Systems](#) Afonso Seixas-Nunes, 2022-05-19 By adopting a multi disciplinary approach this book provides a comprehensive analysis of the legality of the use of autonomous weapons systems under international law It examines different arguments presented by States roboticists and scholars to demonstrate the challenges such systems will create for the laws of war This study examines how technology of warfare seeks to increase the dissociation of risk and communication between weapons and their human operators Furthermore it explains how algorithms might give rise to errors on the battlefield that cannot be directly attributed to human operators Against this backdrop Dr Seixas Nunes examines three distinct legal frameworks the distinction between the legality of weapons and the laws of targeting different mechanisms of individual accountability and the importance of recovering the category of *dolus eventualis* for programmers and technicians and finally State responsibility for violations of the laws of war caused by weapons software errors [Living with Robots](#) Paul Dumouchel, Luisa Damiano, 2017-11-06 From artificial intelligence to artificial empathy a timely and well written volume that addresses many contemporary and future moral questions Library Journal Today's robots engage with human beings in socially meaningful ways as therapists trainers mediators caregivers and companions Social robotics is grounded in artificial intelligence but the field's most probing questions explore the nature of the very real human emotions that social robots are designed to emulate Social roboticists conduct their inquiries out of necessity every robot they design incorporates and tests a number of hypotheses about human relationships Paul Dumouchel and Luisa Damiano show that as roboticists become adept at programming artificial empathy into their creations they are abandoning the conventional conception of human emotions as discrete private internal experiences Rather they are reconceiving emotions as a continuum between two actors who coordinate their affective behavior in real time Rethinking the role of sociability in emotion has also led the field of social robotics to interrogate a number of human ethical assumptions and to formulate a crucial political insight there are simply no universal human characteristics for social robots to emulate What we have instead is a plurality of actors human and nonhuman in noninterchangeable relationships Foreshadowing an inflection point in human evolution *Living with Robots* shows that for social robots to be effective they must be attentive to human uniqueness and exercise a degree of social autonomy More than mere automatons they must become social actors capable of modifying the rules that govern their interplay with humans A detailed tour of the philosophy of artificial intelligence AI especially as it applies to robots intended to build social relationships with humanity If we are to build a robust appropriate ethical structure around the next

generation of technical development some combination of deep learning artificial intelligence robotics and artificial empathy we need to understand that managing the impact of these technologies is far too important to be left to those who are enthusiastically engaged in producing them Times Higher Education

The AI Commander James Johnson, 2024-08-09 What does AI mean for the role of humans in war The AI Commander addresses the largely neglected question of how the fusion of machines into the war machine will affect the human condition of warfare James Johnson emphasizes the mind both human and machine and the mechanisms of thought intelligence consciousness emotion memory experience etc to consider the effects of AI and autonomy on the human condition of war Johnson investigates the vexing and misunderstood and at times contradictory ethical moral and normative implications whether incremental transformative or revolutionary of synthesizing man and machine in future algorithmic warfare or AI enabled centaur warfighting At the heart of these vexing questions are whether we are inevitably moving toward a situation in which AI enabled autonomous weapons will make strategic decisions in place of humans and thus become the owners of those decisions Can AI powered systems replace human commanders And more importantly should they The AI Commander argues that AI cannot be merely passive and neutral force multipliers of human cognition Instead they will likely become either by conscious choice or inadvertently strategic actors in war AI will transform the role and nature of human warfare but not necessarily in the ways most observers expect
