Organization,2021-07-31 Self care interventions are among the most promising and exciting new approaches to improve health and well being both from a health systems perspective and for people who use these interventions The World Health Organization WHO uses the following working definition of self care Self care is the ability of individuals families and communities to promote health prevent disease maintain health and cope with illness and disability with or without the support of a health worker The scope of self care as described in this definition includes health promotion disease prevention and control self medication providing care to dependent persons seeking hospital specialist primary care if necessary and rehabilitation including palliative care It includes a range of self care modes and approaches While this is a broad definition that includes many activities it is important for health policy to recognize the importance of self care especially where it intersects with health systems and health professionals Worldwide an estimated shortage of 18 million health workers is anticipated by 2030 a record 130 million people are currently in need of humanitarian assistance and disease outbreaks are a constant global threat At least 400 million people worldwide lack access to the most essential health services and every year 100 million people are plunged into poverty because they have to pay for health care out of their own pockets There is an urgent need to find innovative strategies that go beyond the conventional health sector response While self care is not a new term or concept self care interventions have the potential to increase choice when they are accessible and affordable and they can also provide more opportunities for individuals to make informed decisions regarding their health and health care In humanitarian settings for example due to lack of or limited health infrastructure and medical services in the crisis affected areas self care could play an important role to improve health related outcomes Self care also builds upon existing movements such as task sharing which are powerful strategies to support health systems **WHO guideline on self-care interventions for health and well-being, 2022 revision** World Health Organization,2022-06-17 A global shortage of an

estimated 18 million health workers is anticipated by 2030 a record 130 million people are in need of humanitarian assistance and there is the global threat of pandemics such as COVID 19 At least 400 million people worldwide lack access to the most essential health services and every year 100 million people are plunged into poverty because they have to pay for healthcare out of their own pockets There is therefore an urgent need to find innovative strategies that go beyond the conventional health sector response These interventions are also relevant for all three areas of the Thirteenth General Programme of Work of the World Health Organization WHO recommends self care interventions for every country and economic setting as critical components on the path to reaching universal health coverage UHC promoting health keeping the world safe and serving the vulnerable *Handbook of Disability* Marcia H.
