 most prominent feature is the progressive destruction of articular cartilage which results in impaired joint motion severe
 pain and ultimately disability Its prevalence and its impact on daily life pose a significant public health problem Today a cure
 for osteoarthritis remains elusive and the management of the disease is largely palliative focusing on the alleviation of
 symptoms Current recommendations include a combination of pharmacological and non pharmacological treatments The
 term non pharmacological includes physical therapy and rehabilitation but also nutraceuticals All guidelines on osteoarthritis
 management highlight the importance of weight loss and physical activity to improve the functional status of patients A
 number of alternative therapies are also commonly suggested by physicians and physiotherapists in their daily practice The
 efficacy of these therapies is not evidenced by strong clinical trials This category includes education information
 electrotherapy ultrasound electromagnetic field spa hydrotherapy acupuncture etc *Non Pharmacological Therapies in the*
Management of Osteoarthritis reviews the clinical relevance of these therapies and the difficulties in conducting high quality

Pharmaceutical companies academic researchers and government agencies such as the Food and Drug Administration and the National Institutes of Health all possess large quantities of clinical research data If these data were shared more widely within and across sectors the resulting research advances derived from data pooling and analysis could improve public health enhance patient safety and spur drug development Data sharing can also increase public trust in clinical trials and conclusions derived from them by lending transparency to the clinical research process Much of this information however is never shared Retention of clinical research data by investigators and within organizations may represent lost opportunities in biomedical research Despite the potential benefits that could be accrued from pooling and analysis of shared data barriers to data sharing faced by researchers in industry include concerns about data mining erroneous secondary analyses of data and unwarranted litigation as well as a desire to protect confidential commercial information Academic partners face significant cultural barriers to sharing data and participating in longer term collaborative efforts that stem from a desire to protect intellectual autonomy and a career advancement system built on priority of publication and citation requirements Some barriers like the need to protect patient privacy pre sent challenges for both sectors Looking ahead there are also a number of technical challenges to be faced in analyzing potentially large and heterogeneous datasets This public workshop focused on strategies to facilitate sharing of clinical research data in order to advance scientific knowledge and public health While the workshop focused on sharing of data from preplanned interventional studies of human subjects models and projects involving sharing of other clinical data types were considered to the extent that they provided lessons learned and best

practices The workshop objectives were to examine the benefits of sharing of clinical research data from all sectors and among these sectors including for example benefits to the research and development enterprise and benefits to the analysis of safety and efficacy Sharing Clinical Research Data Workshop Summary identifies barriers and challenges to sharing clinical research data explores strategies to address these barriers and challenges including identifying priority actions and low hanging fruit opportunities and discusses strategies for using these potentially large datasets to facilitate scientific and public health advances

Biomarkers for Endometriosis Thomas D'Hooghe, 2017-09-22 This book presents an overview of the diagnostic performance of non or semi invasive tests for endometriosis in peripheral blood endometrium saliva peritoneal fluid and urine The value of existing and emerging systems biology technologies for biomarker development is addressed in several chapters on genetics microarrays proteomics and metabolomics Although tests with high sensitivity and acceptable specificity have been developed sometimes validated in independent populations and seem promising more research is needed to translate these data into clinical benefit for patients and coordinate efforts internationally to standarize analysis reports and operating procedures The gold standard to diagnose endometriosis is currently through laparoscopic inspection with histological confirmation a surgical procedure with rare but significant potential risks for the patients A non invasive test for endometriosis would be critical for the early detection of endometriosis of symptomatic women with pelvic pain and or subfertility with normal ultrasound This would include nearly all cases of minimal mild endometriosis some cases of moderate severe endometriosis without a clearly visible ovarian endometrioma and cases with pelvic adhesions and or other pelvic pathology who might benefit from surgery to improve pelvic pain and or subfertility Such a test would also be useful in symptomatic women with ultrasound imaging suspicious for endometriosis since it may be difficult to differentiate an ovarian endometrioma from other ovarian cysts and since the quality of ultrasound imaging is highly variable worldwide
