Neuroanesthesia and Cerebrospinal Protection Hiroyuki Uchino, Kazuo Ushijima, Yukio Ikeda, 2015-08-07. This book is a knowledge-based text that covers the anatomy, neurophysiology and neuropharmacology needed to carry out the necessary management and cerebrospinal protection during neuroanesthesia. Especially to make the subject of neuroanesthesia more approachable, we introduce surgical measures utilized in neurosurgery, cardiovascular surgery, neuromodulation and related procedures. The main purpose of neuroanesthesia/neurocritical care is to deliver cerebrospinal protection in neurosurgical and cardiovascular surgeries. How should we select the best anesthetic management to prevent neurological complications for patients who, for instance, undergo different types of surgery for subarachnoid hemorrhage, stroke, head trauma, carotid endarterectomy or cardiovascular surgery under cardiopulmonary bypass? These pathological conditions include the risk of transient cerebrospinal ischemia and if our management is not precise, it may induce serious neurological sequelae. Although there is an urgent need to establish the treatment and elucidate the molecular mechanisms of cerebrospinal injury, many components are intertwined, making this a challenge we have not completely solved yet. This volume makes the management of neuroanesthesia more accessible, not only for primary residents but also for specialists, providing a valuable resource on the current perspectives of neuroanesthesia.

A Comprehensive Handbook of IVF Sushma Deshmukh, Bindu Chimote, 2024-02-03. In vitro fertilisation (IVF) is one of several techniques available to help people with fertility problems have a baby. During IVF, an egg is removed from the woman's ovaries and fertilised with sperm in a laboratory. The fertilised egg, called an embryo, is then returned to the woman's womb to grow and develop. This book is a complete guide to IVF for specialists and trainees in reproductive medicine. Divided into two parts, the first sections discuss clinical aspects of IVF, including laboratory set-up, patient selection and preparation, drugs and stimulation protocols, male infertility, the operating theatre and assisted reproductive technology (ART) techniques, special situations such as endometriosis and recurrent implantation failure, and recent advances in ART. The second part of the book covers laboratory aspects, explaining the physical and practical processes of IVF, including management of culture conditions, quality control, male and female gametes, embryo gradation and implantation, cryopreservation and sperm freezing, and advanced embryology. With a recognised international team of authors, this comprehensive text is further enhanced by diagrams and figures to assist learning.
