Method of Dimensionality Reduction in Contact Mechanics Valentin L. Popov, Markus Hess, Emanuel Willert, 2018-08-08
The present book is a collection of open access papers describing the foundations and applications of the Method of Dimensionality Reduction MDR first published in the Journal Facta Universitatis Series Mechanical Engineering in the years 2014 2018 The Method of Dimensionality Reduction MDR is a method of calculation and simulation of contacts of elastic and viscoelastic bodies It consists essentially of two simple steps a substitution of the three dimensional continuum by a uniquely defined one dimensional linearly elastic or viscoelastic foundation Winkler foundation and b transformation of the three dimensional profile of the contacting bodies by means of the MDR transformation As soon as these two steps are done the contact problem can be considered to be solved For axial symmetric contacts only a small calculation by hand is required which does not exceed elementary calculus and will not be a barrier for any practically oriented engineer Alternatively the MDR can be implemented numerically which is almost trivial due to the independence of the foundation elements In spite of its simplicity all results are exact The present book brings together papers covering the most important aspects of the MDR and providing a practical guide for its use **Passive and Active Measurement** Arvind Krishnamurthy, Bernhard Plattner, 2010-04-01 The 2010 edition of the Passive and Active Measurement Conference was the 11th of a series of successful events Since 2000 the Passive and Active Measurement PAM conference has provided a forum for presenting and discussing innovative and early work in the area of Internet measurements PAM has a tradition of being a workshop like conference with lively discussion and active participation from all attendees This event focuses on research and practical applications of network measurement and analysis techniques This year's conference was held at ETH Zurich Switzerland PAM 2010 attracted 79 submissions Each paper was carefully reviewed by at least three members of the Technical Program Committee The reviewing process led to the acceptance of 23 papers The papers were rearranged in nine sessions covering the following areas routing transport protocols mobile devices topology

Computing Services,1985* **Philosophy and Computing** Thomas M. Powers,2017-10-26 This book features papers from CEPE IACAP 2015 a joint international conference focused on the philosophy of computing Inside readers will discover essays that explore current issues in epistemology philosophy of mind logic and philosophy of science from the lens of computation Coverage also examines applied issues related to ethical social and political interest The contributors first explore how computation has changed philosophical inquiry Computers are now capable of joining humans in exploring foundational issues Thus we can ponder machine generated explanation thought agency and other quite fascinating concepts The papers are also concerned with normative aspects of the computer and information technology revolution They examine technology specific analyses of key challenges from Big Data to autonomous robots to expert systems for infrastructure control and financial services The virtue of a collection that ranges over philosophical questions such as this one does lies in the prospects for a more integrated understanding of issues These are early days in the partnership between philosophy and information technology Philosophers and researchers are still sorting out many foundational issues They will need to deploy all of the tools of philosophy to establish this foundation This volume admirably showcases those tools in the hands of some excellent scholars
