Scalability Challenges in Web Search Engines B. Barla Cambazoglu, Ricardo Baeza-Yates, 2022-06-01 In this book we aim to provide a fairly

comprehensive overview of the scalability and efficiency challenges in large scale web search engines More specifically we cover the issues involved in the design of three separate systems that are commonly available in every web scale search engine web crawling indexing and query processing systems We present the performance challenges encountered in these systems and review a wide range of design alternatives employed as solution to these challenges specifically focusing on algorithmic and architectural optimizations We discuss the available optimizations at different computational granularities ranging from a single computer node to a collection of data centers We provide some hints to both the practitioners and theoreticians involved in the field about the way large scale web search engines operate and the adopted design choices Moreover we survey the efficiency literature providing pointers to a large number of relatively important research papers Finally we discuss some open research problems in the context of search engine efficiency

Analyzing Discourse and Text Complexity for Learning and Collaborating Mihai Dascălu, 2013-11-26 With the advent and increasing popularity of Computer Supported Collaborative Learning CSCL and e learning technologies the need of automatic assessment and of teacher tutor support for the two tightly intertwined activities of comprehension of reading materials and of collaboration among peers has grown significantly In this context a polyphonic model of discourse derived from Bakhtin s work as a paradigm is used for analyzing both general texts and CSCL conversations in a unique framework focused on different facets of textual cohesion As specificity of our analysis the individual learning perspective is focused on the identification of reading strategies and on providing a multi dimensional textual complexity model whereas the collaborative learning dimension is centered on the evaluation of participants involvement as well as on collaboration assessment Our approach based on advanced Natural Language Processing techniques provides a qualitative estimation of the learning process and enhances understanding as a mediator of learning by providing automated feedback to both learners and teachers or tutors The main benefits are its flexibility extensibility and nevertheless specificity for covering multiple stages starting from reading classroom materials to discussing on specific topics in a collaborative manner and finishing the feedback loop by verbalizing metacognitive thoughts
