Simulation, Modeling, and Programming for Autonomous Robots Noriako Ando, Stephen Balakirsky, Thomas Hemker, Monica Reggiani, Oskar von Stryk, 2010-11-11 Why are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in specific robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of advancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications suffers from the lack of widely used tools libraries and algorithms that are redesigned in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e.g. by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and

applications. However, their use may still be regarded with skepticism. Seamless migration of code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling. These challenges drive the quest for the next generation of methodologies and tools for robot development. The objective of the International Conference on Simulation Modeling and Programming for Autonomous Robots (SIMPAR) is to offer a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software.

Thermo-Hydro-Mechanical-Chemical Processes in Fractured Porous Media: Modelling and Benchmarking Olaf Kolditz, Thomas Nagel, Hua Shao, Wenqing Wang, Sebastian Bauer, 2018-03-01. The book comprises the 3rd collection of benchmarks and examples for porous and fractured media mechanics. Analysis of thermo hydro mechanical chemical (THMC) processes is essential to a wide area of applications in environmental engineering such as geological waste deposition, geothermal energy utilization, shallow and deep systems, carbon capture and storage (CCS) as well as water resources management and hydrology. In order to assess the feasibility, safety as well as sustainability of geoenvironmental applications, model based simulation is the only way to quantify future scenarios. This charges a huge responsibility concerning the reliability of conceptual models and computational tools. Benchmarking is an appropriate methodology to verify the quality and validate the concept of models based on best practices. Moreover, benchmarking and code comparison are building strong community links. The 3rd THMC benchmark book also introduces benchmark based tutorials; therefore the subtitle is selected as 'From Benchmarking to Tutoring'. The benchmark book is part of the OpenGeoSys initiative, an open source project to share knowledge and experience in environmental analysis and scientific computation. The new version of OGS 6 is introduced and first benchmarks are presented therein; see appendices.

The objective of the workshops associated with the ER2000 19th International Conference on Conceptual Modeling was to give participants the

opportunity to present and discuss emerging hot topics thus adding new perspectives to conceptual modeling This attracts communities which have begun to or which have already recognized the importance of conceptual modeling for solving their problems To meet this objective we selected the following two topics Conceptual Modeling Approaches for E Business eCOMO2000 aimed at studying the application of conceptual modeling techniques specially to e business The World Wide Web and Conceptual Modeling WCM2000 which analyzes how conceptual modeling can help address the challenges of Web development management and use eCOMO2000 is the first international workshop on Conceptual Modeling approaches for E Business It was intended to work out and to discuss the actual state of research on conceptual modeling aspects and methods within the realm of the network economy which is driven by both traditionally organized enterprises and dynamic networks Following the philosophy of the ER workshops the selection of eCOMO contributions was done very carefully and restrictively six accepted papers out of thirteen submissions in order to guarantee an excellent workshop program We are deeply indebted to the authors and to the members of the program committee whose work resulted in this outstanding program

Modeling and Tools for Network Simulation Klaus Wehrle, Mesut Günes, James Gross, 2010-09-22 A crucial step during the design and engineering of communication systems is the estimation of their performance and behavior especially for mathematically complex or highly dynamic systems network simulation is particularly useful This book focuses on tools modeling principles and state of the art models for discrete event based network simulations the standard method applied today in academia and industry for performance evaluation of new network designs and architectures The focus of the tools part is on two distinct simulation engines OmNet and ns 3 while it also deals with issues like parallelization software integration and hardware simulations The parts dealing with modeling and models for network simulations are split into a wireless section and a section dealing with higher layers The wireless section covers all essential modeling principles for dealing with physical layer link layer and wireless channel behavior In addition detailed models for prominent wireless systems like IEEE 802.11 and IEEE 802.16 are presented In the part on higher layers classical modeling approaches for the network layer the transport layer and the application layer are presented in addition to modeling approaches for peer to peer networks and topologies of networks The modeling parts are accompanied with catalogues of model implementations for a large set of different simulation engines The book is aimed at master students and PhD students of computer science and electrical engineering as well as at researchers and practitioners from academia and industry that are dealing with network simulation at any layer of the protocol stack
