

OPERATION

SICKLE BAR ADJUSTMENT (Figure 8)

The pitch of the cutting fingers (A) on sickle bar can be adjusted by repositioning the break-away housing (D) (Fig. 8). For normal cutting, the shear fingers should be positioned with a downward pitch of approximately $1/4^\circ$ as shown. It may be necessary to increase downward pitch of shear fingers when cutting extremely heavy, tangled, or matted grass. If green undergrowth is intermingled heavily with dry grass and weeds from previous seasons (particularly on hills or slopes), it may be necessary to test out the area to determine most effective path of cutting. In extreme conditions it may be necessary to cut only in one direction.

Fig. 11

Note: Mis-alignment of pitman drive belt may be noticed, however special grooved pulleys allow for this to compensate for pulley position changes when setting lead and pitch.

To install Pitman drive belt, open safety break-back release, manually, and slide belt over carriage pipe. Install belt (K) on jackshaft pulley (H) and Pitman Pulley (L). Position belt retainer as illustrated (J). (Fig. 9a). Push sickle bar back into operating position (I).

To change pitch angle of mower bar, loosen bolts (C) Fig. 9 and remove tie rod (G). Raise mower bar to vertical position and push forward to increase downward pitch of cutting fingers. After desired setting is reached, lower mower bar to ground, tighten bolts (C) and reinstall tie rod.
