Transparent Designs Michael L. Black,2022-03-29 This fascinating cultural history of the personal computer explains how user friendly design allows tech companies to build systems that we cannot understand Modern personal computers are easy to use and their welcoming user friendly interfaces encourage us to see them as designed for our individual benefit

Rarely however do these interfaces invite us to consider how our individual uses support the broader political and economic strategies of their designers In *Transparent Designs* Michael L Black revisits early debates from hobbyist newsletters computing magazines user manuals and advertisements about how personal computers could be seen as usable and useful by the average person Black examines how early personal computers from the Tandy TRS 80 and Commodore PET to the IBM PC and Apple Macintosh were marketed to an American public that was high on the bold promises of the computing revolution but also skeptical about their ability to participate in it Through this careful archival study he shows how many of the foundational principles of usability theory were shaped through disagreements over the languages and business strategies developed in response to this skepticism In short this book asks us to consider the consequences of a computational culture that is based on the assumption that the average person does not need to know anything about the internal operations of the computers we've come to depend on for everything Expanding our definition of usability *Transparent Designs* examines how popular and technical rhetoric shapes user expectations about what counts as usable and useful as much as or even more so than hardware and software interfaces Offering a fresh look at the first decade of personal computing Black highlights how the concept of usability has been leveraged historically to smooth over conflicts between the rhetoric of computing and its material experience Readers interested in vintage computing the history of technology digital rhetoric or American culture will be fascinated in this book

What Algorithms Want Ed Finn, 2018-10-09 The gap between theoretical ideas and messy reality as seen in Neal Stephenson's *Snow Crash* and *Star Trek* We depend on we believe in algorithms to help us get a ride choose which book to buy execute a mathematical proof It's as if we think of code as a magic spell an incantation to reveal what we need to know and even what we want Humans have always believed that certain invocations the marriage vow the shaman's curse do not merely describe the world but make it Computation casts a cultural shadow that is shaped by this long tradition of magical thinking In this book Ed Finn considers how the algorithm in practical terms a method for solving a problem has its roots not only in mathematical logic but also in cybernetics philosophy and magical thinking Finn argues that the algorithm deploys concepts from the idealized space of computation in a messy reality with unpredictable and sometimes fascinating results Drawing on sources that range from Neal Stephenson's *Snow Crash* to Diderot's *Encyclopédie* from Adam Smith to the *Star Trek* computer Finn explores the gap between theoretical ideas and pragmatic instructions He examines

the development of intelligent assistants like Siri the rise of algorithmic aesthetics at Netflix Ian Bogost's satiric Facebook game Cow Clicker and the revolutionary economics of Bitcoin He describes Google's goal of anticipating our questions Uber's cartoon maps and black box accounting and what Facebook tells us about programmable value among other things If we want to understand the gap between abstraction and messy reality Finn argues we need to build a model of algorithmic reading and scholarship that attends to process spearheading a new experimental humanities *The Hackable City* Michiel de Lange, Martijn de Waal, 2018-12-05 This open access book presents a selection of the best contributions to the Digital Cities 9 Workshop held in Limerick in 2015 combining a number of the latest academic insights into new collaborative modes of city making that are firmly rooted in empirical findings about the actual practices of citizens designers and policy makers It explores the affordances of new media technologies for empowering citizens in the process of city making relating examples of bottom up or participatory practices to reflections about the changing roles of professional practitioners in the processes as well as issues of governance and institutional policymaking

The Reinvention of Populist Rhetoric in The Digital Age Mark Rolfe, 2016-11-23 This highly original work considers the rhetoric of political actors and commentators who identify digital media as the means to a new era of politics and democracy Placing this rhetoric in a historical and intellectual context it provides a compelling explanation of the reinvention and thematic recurrence of democratic discourse The author investigates the populist sources of rhetoric used by digital politics enthusiasts as outsiders inaugurating new eras of democracy with digital media such as Barack Obama and Julian Assange and explores the generations of rhetorical and political history behind them The book places their rhetoric in the context of the permanent tensions between insiders and outsiders between the political class and the populace which are inherent to representative democracy Through a theoretical and conceptual research that is historically grounded and comparative it offers rhetorical analysis of candidates for the 2016 presidential election and discusses digital democracy particularly discussing their origins in American populism and their influence on other countries through Americanization Uniquely it offers a sceptical assessment of epochal claims and a historical rhetorical account of two of the defining figures of twentieth century politics to date and reveals how modern rhetoric is grounded in an older form of anti politics and mobilises tropes that are as old as representative democracy itself

Philosophy of the Tourist Hiroki Azuma, 2023-05-09 An inventive philosophical study that reconsiders the figure of the tourist Tourism is a characteristically modern phenomenon yet modern thinkers have tended to deride the tourist as a figure of homogenizing globalism This philosophical study considers the tourist anew as a subject position that enables us to redraw the map of globalized culture in an era increasingly in revolt against the liberal intellectual worldview and its call for the welcome of the Other Why has the tourist proved so resistant to philosophical treatment asks Hiroki Azuma Tracing the reasons for this exclusion through the work of Rousseau and Voltaire and subsequently in Kant Carl Schmitt Alexandre Kojve Hannah Arendt and Hardt and Negri Azuma contends that the figure of the tourist has been rendered illegible by becoming ensnared in a series of misleading conceptual dichotomies and a linear model of world history In the widening gap between the infrastructure of globalization and inherited ties of local and national belonging Azuma's retheorization of the tourist presents an alternative to the choice between doubling down on local identity and roots or hoping for the spontaneous uprising of a multitude from within the

great networked Empire For the tourist is the subject capable of moving most freely between the strata of the global and the local With explorations of the connection between tourism and fan fiction contingency and misdelivery cyberspace and the uncanny and dark tourism Azuma s inventive and optimistic philosophical essay sheds unexpected new light on a mode of engagement with the world that is familiar to us all
