the technology that forms the backbone of this country's economic vitality and national security including satellite and airline operations communications networks navigation systems and the electric power grid As the Nation becomes ever more dependent on these technologies space weather poses an increasing risk to infrastructure and the economy Further the Strategic National Risk Assessment has identified space weather as a hazard that poses significant risk to the security of the Nation Clearly reducing vulnerability to space weather needs to be a national priority The National Space Weather Strategy Strategy and the accompanying National Space Weather Action Plan Action Plan together seek to enhance the integration of existing national efforts and to add important capabilities to help meet growing demands for space weather information The Strategy and Action Plan build on recent efforts to reduce risks associated with natural hazards and improve resilience of essential facilities and systems aiming to foster a collaborative environment in which government industry and the American people can better understand and prepare for the effects of space weather The Nation must continue to leverage existing public and private networks of expertise and capabilities and pursue targeted enhancements to improve the ability to manage risks associated with space weather This book outlines objectives for enhancing the Nation's space weather readiness in three key areas national preparedness forecasting and understanding It also describes the study process the study requirements and their relevance and importance an assessment and accounting of current and planned space weather observing systems used or to be used for operations an analysis of gaps between the observing systems capabilities and their ability to meet documented requirements and a summary of key findings

National Space Weather Program Implementation Plan (Color) Committee for Space Weather, 2015-01-06 In the six years since the inception of the National Space Weather Program NSWP space weather has virtually become a household word Space weather refers to conditions on the Sun and in the solar wind magnetosphere ionosphere and thermosphere that can influence the performance and reliability of space borne and ground based technological systems and can endanger human life or health The growing awareness within the general public is largely the result of a conscious effort by all space weather stakeholders to educate the nation on the effects of solar storms and their potential impacts on the modern technology so important to daily life In addition to increased awareness solid advances have been made in our knowledge of the space weather system and in our ability to forecast potentially disruptive space weather events The NSWP Strategic Plan released in 1995 put forth a strategy for achieving space weather goals The program elements outlined in this strategy are shown in the figure below The Strategic Plan was followed in 1997 by the NSWP Implementation Plan which identified specific objectives and recommended activities necessary for improving space weather predictive capabilities In the last six years significant progress has been made in all programmatic areas

Space Weather & Telecommunications John M.

Goodman,2006-06-02 Space weather has an enormous influence on modern telecommunication systems even though we may not always appreciate it We shall endeavor throughout this monograph to expose the relationships between space weather factors and the performance or lack thereof of telecommunication navigation and surveillance systems Space weather is a rather new term having found an official expression as the result of several government initiatives that use the term in the title of programs But it is the logical consequence of the realization that space also has weather just as the lower atmosphere has weather While the weather in space will influence space systems that operate in that special environment it is also true that space weather will influence systems that we understand and use here on terra firma This brings space weather home as it were It is not some abstract topic of interest to scientists alone it is a topic of concern to all of us I hope to make this clear as the book unfolds Why have I written this book First of all I love the topic While at the Naval Research Laboratory NRL I had the opportunity to do research on many topics including Thomson scatter radar and satellite beacon studies of the ionosphere utilization of the NASA Gemini platform for ionospheric investigations microwave radar propagation studies I F signal intercept and direction finding experiments and multi disciplinary studies of certain physical phenomena relevant to weapon systems development

Space Weather Study Using Multipoint Techniques L.-H. Lyu,2002-05-08 Magnetic storms may cause damage to satellites radiation hazard to astronauts disruption of radio communications and interruption of ground electric power lines Space weather prediction becomes an important issue to be addressed in the twenty first century International Solar Terrestrial Program ISTP employs five satellites to probe the solar wind and magnetosphere providing valuable information for space weather prediction The Asia Pacific region is becoming one of the economic centers in the world The continuous drive for scientific and technological progress in parallel is evidenced by the establishment of many space research organizations in many countries of this area In Taiwan the National Space Program Office NSPO established

her third satellite program COSMIC Constellation Observing Systems for Meteorology Ionosphere and Climate which is a science experiment to demonstrate the utility of atmospheric radio limb soundings from a constellation of six low earth orbiting satellites in operational weather prediction space weather monitoring and climate monitoring and research In order to provide a forum to discuss the many new results in this rapid moving field and to forge international collaborations a three day COSPAR Colloquium on Space Weather Study Using Multipoint Techniques was held This colloquium have provided a forum for experts from the international community to present new results on the timely topic space weather *Strategic plan National Space Weather Program (U.S.),1995* Sentinels of the Sun Barbara B. S. Government,2017-12-06 This collection reproduces two major Federal documents about space weather the National Space Weather Action Plan and the National Space Weather Strategy issued in October 2015 Space weather events are naturally occurring phenomena that have the potential to disrupt electric power systems satellite aircraft and spacecraft operations telecommunications position navigation and timing services and other technologies and infrastructures that contribute to the Nation s security and economic vitality These critical infrastructures make up a diverse complex interdependent system of systems in which a failure of one could cascade to another Given the importance of reliable electric power and space based assets it is essential

that the United States has the ability to protect mitigate respond to and recover from the potentially devastating effects of space weather The National Space Weather Strategy Strategy released concurrently with this National Space Weather Action Plan Action Plan details national goals for leveraging existing policies and ongoing research and development efforts regarding space weather while promoting enhanced domestic and international coordination and cooperation across public and private sectors The implementation of the Strategy will require the action of a nationwide network of governments agencies emergency managers academia the media the insurance industry nonprofit organizations and the private sector Strong public private partnerships must be established to enhance observing networks conduct research develop prediction models and supply the services necessary to protect life and property and to promote economic prosperity These partnerships will form the backbone of a space weather ready Nation This Action Plan details the activities outcomes and timelines that will be undertaken by Federal departments and agencies for the Nation to make progress toward the Strategy s goals Geomagnetic storms can induce geo electric fields in the Earth s crust driving electric currents in long conductors on or near the Earth s surface These induced geo electric fields present a risk to the reliable operation of electric power systems and may affect gas and oil pipelines railways and other infrastructures that have long conductive paths For example a geo electric field induced by a space weather event can produce electric currents i e geomagnetically induced currents GICs that could affect electric grid system stability with the potential to damage or cause the failure of essential electric power transmission components Depending on the severity of the geomagnetic storm cascading system failure or damage could lead to regional interruptions of electrical power distribution and result in complications with recovery and restoration efforts To be useful geo electric field benchmarks should characterize the induced geo electric field at the Earth s surface E field This parameter can feed directly into vulnerability studies conducted by industry and the private sector
