schedule In the end the maximum duration of stays on the Moon would be limited to 54 hours The extended LM weighed up to 36 500 pounds compared to 32 000 for earlier versions The ELM s larger payload capacity enabled it to carry the 463 pound mass Lunar Roving Vehicle and other scientific equipment The LRV greatly enhanced the astronauts range and ability to retrieve samples It s never been easy to find a copy of this text because copies were never made available to the general public until now This reprint features all the original text and diagrams It s a wonderful reference for the space flight fan docent or engineering buff or for anyone else who ever wondered How d they do that **The Caravan Manual. Rev.ed** John Wickersham.,1996 **The 'Caravan' Manual** ,1959 **Moon Manual** David M Harland,2016-04-15 There is renewed interest in the Moon in recent years with the news that a Chinese lunar rover landed on the Moon in January 2014 and NASA announcing that it is looking for private partners to land a robot on the Moon s surface as the first step in a programme to exploit the commercial opportunities offered by the Moon Recent lunar expeditions by both orbiting spacecraft and landers have uncovered far more detail about the Moon s surface and geology including the trail of Neil Armstrong s first walk on the Moon in 1969 This manual explains in simple and straightforward terms with a wealth of illustrations and photographs what we have discovered about the Moon over the centuries along with a general overview of the vehicles involved in the exploration **LEM LUNAR EXCURSION MODULE FAM** Grumman Aircraft Engineering Co,2011-05 Designed by Grumman s brilliant Tom Kelly the Apollo Lunar Excursion Module or LEM for short was a triumph of purpose built engineering In the six years 1962 1968 between drawing board and first flight a myriad of challenges were overcome related to weight reliability and safety The final design designated the Lunar Module or LM boasted tiny windows instead of large portholes four legs instead of five and most famously had no seats instead relying on the astronauts legs to cushion a lunar landing Ten LMs made it into space including three flown in development and test missions and six which landed on the Moon A seventh famously saved the crew of Apollo 13 when that mission s Command Module suffered a catastrophic malfunction Originally created for NASA by Grumman in 1964 this LEM Familiarization Manual provides an operational description of all subsystems and major components of the lunar lander It includes sections about the LEM mission spacecraft structure operational subsystems prelaunch operations and ground support equipment *Luna Observer's Manual* Association of Lunar and Planetary Observers (U.S.),Charles L. Ricker,1969 **The Caravan Manual ... Eighth Edition, Revised** William Meredith WHITEMAN,1959 **Apollo Lunar Roving Vehicle Operations Handbook** Nasa,2012 Developed in only 17 months at a cost of 38 million dollars the Lunar Roving Vehicle LRV greatly expanded the survey range of the astronauts on Apollo 15 16 and 17 Designed to operate in the low gravity vacuum of the Moon the LRV boasted an ingenious design that allowed it to be folded up and stored inside the Lunar Module It would then be deployed using a system of pulleys and brake reels The LRV s frame was made of aluminum alloy 2219 tubing assemblies giving the vehicle a fairly small mass of 210kg but allowing it to carry up to 490kg on the lunar surface The LRV s lightweight tires were made of zinc

coated steel strands with titanium chevrons and aluminum hubs and offered a ground clearance of 36cm The LRV featured two side by side foldable seats a TV camera and a dish antenna Four independent DC motors one for each wheel powered by two 36 volt batteries provided maneuvering power Both sets of wheels could be used to steer although they could also be decoupled For safety reasons astronauts never drove the LRV a distance farther from the LM than they could safely walk in the unlikely event that the rover failed On each of the three day missions that it was employed the LRV was used daily for three traverses The longest was on Apollo 17 when it was driven 20 1km and it traveled a total of 35 9km on that mission The total distance traveled by all three LRVs was 90 4km Almost all of it was done without incident although some damage to the fender extensions caused dust problems on Apollo 16 and 17 Harrison Schmitt of Apollo 17 praised the design and operation of the vehicle saying the Lunar Rover proved to be the reliable safe and flexible lunar exploration vehicle we expected it to be Originally created for the astronauts by prime contractor Boeing this Lunar Roving Vehicle Operations Handbook describes the LRV and its systems and details the deployment and driving procedures It also details the 1 gravity LRV used to train astronauts on Earth A lengthy appendix provides performance and other data *Lunar Module LM 10 Thru LM 14* ,2012 Originally created for NASA in 1969 by prime contractor Grumman this Lunar Module Vehicle Familiarization Manual was mandatory reading for Apollo astronauts contractors and NASA support staff This version of the manual describes the so called ELM or Extended Lunar Modules designed for the J class missions Apollo 15 17 and the never flown Apollo 18 and 19
