emergence of disruptive technologies that have led to a significant change in the role of mathematics and statistics for
problem solving with the use of sophisticated software and hardware in solving complex systems and process In the era of
digital technology mathematics and statistics need to be highly relevant to be able to cater for the needs of IR4 0 such as big
data analytics simulation autonomous system and cloud computing Motivated by this development a total of 26 chapters are

contributed by respectable experts for this book The main scope of the book is to conduct a new system of modeling and simulations on solving differential equations nonlinear equations energy epidemiology and risk assessment This book is of interest for postgraduate students researchers as well as other scientists who are working in numerical modeling and simulations based on efficient mathematical and statistical techniques Competition Science Vision ,1999-03 Competition Science Vision monthly magazine is published by Pratiyogita Darpan Group in India and is one of the best Science monthly magazines available for medical entrance examination students in India Well qualified professionals of Physics Chemistry Zoology and Botany make contributions to this magazine and craft it with focus on providing complete and to the point study material for aspiring candidates The magazine covers General Knowledge Science and Technology news Interviews of toppers of examinations study material of Physics Chemistry Zoology and Botany with model papers reasoning test questions facts quiz contest general awareness and mental ability test in every monthly issue Analytical Methods for Nonlinear Oscillators and Solitary Waves Chu-Hui He,Hamid M. Sedighi,Ji-Huan He,Yusry El-Dib,Dragan Marinkovic,2023-11-24 The most well known analytical method is the perturbation method which has led to the great discovery of Neptune in 1846 and since then mathematical prediction and empirical observation became two sides of a coin in physics However the perturbation method is based on the small parameter assumption and the obtained solutions are valid only for weakly nonlinear equations which have greatly limited their applications to modern physical problems To overcome the shortcomings many mathematicians and physicists have been extensively developing various technologies for several centuries however there is no universal method for all nonlinear problems and mathematical prediction with remarkably high accuracy is still much needed for modern physics for example the solitary waves traveling along an unsmooth boundary the low frequency property of a harvesting energy device the pull in voltage in a micro electromechanical system Now various effective analytical methods have appeared in the open literature e g the homotopy perturbation method and the variational iteration method An analytical solution provides a fast insight into its physical properties of a practical problem e g frequency amplitude relation of a nonlinear oscillator solitary wave in an optical fiber pull in instability of a microelectromechanical system making mathematical prediction even more attractive in modern physics Nonlinear physics has been developing into a new stage where the fractal fractional differential equations have to be adopted to describe more accurately discontinuous problems and it becomes ever more difficult to find an analytical solution for such nonlinear problems and the analytical methods for fractal fractional differential equations have laid the foundations for nonlinear physics **Advanced Accounts Volume II, 19th Edition** Shukla M.C./ Grewal T.S. & Gupta S.C., Keeping in pace with the changing accounting practices this revised edition of Advanced Accounts Volume II provides a contemporary and comprehensive presentation of accounting concepts and applications *Official Gazette of the United States Patent and Trademark Office* ,2003 **NTA PM Yasasvi Class XI Exam Prep Book (English Edition) | Scholarship Scheme | 15 Practice Tests (1500 Solved MCQs)**
