in September 2001 The 32 revised full papers presented were carefully reviewed and selected from 66 paper submissions Also included are a corrected version of a paper from the predecessor volume short reports on the software systems exhibition two papers of the special session on graph exchange formats and a report on the annual graph drawing contests The papers are organized in topical sections on hierarchical drawing planarity crossing theory compaction planar graphs symmetries interactive drawing representations aesthetics 2D and 3D embeddings data visualization floor planning and planar drawing

Digraphs Jorgen Bang-Jensen, Gregory Z. Gutin, 2013-06-29 Graph theory is a very popular area of discrete mathematics with not only numerous theoretical developments but also countless applications to practical problems As a research area graph theory is still relatively young but it is maturing rapidly with many deep results having been discovered over the last couple of decades The theory of graphs can be roughly partitioned into two branches the areas of undirected graphs and directed graphs digraphs Even though both areas have numerous important applications for various reasons undirected graphs have been studied much more extensively than directed graphs One of the reasons is that undirected graphs form in a sense a special class of directed graphs symmetric digraphs and hence problems that can be formulated for both directed and undirected graphs are often easier for the latter Another reason is that unlike for the case of undirected graphs for which there are several important books covering both classical and recent results no previous book covers more than a small fraction of the results obtained on digraphs within the last 25 years Typically digraphs are considered only in one chapter or by a few elementary results scattered throughout the book Despite all this the theory of directed graphs has developed enormously within the last three decades There is an extensive literature on digraphs more than 3000 papers Many of these papers contain not only interesting theoretical results but also important algorithms as well as applications

The Discrete Math Workbook Sergei Kurgalin, Sergei Borzunov, 2020-08-12 This practically focused study guide introduces the fundamentals of discrete mathematics through an extensive set of classroom tested problems Each chapter presents a concise introduction to the relevant theory followed by a detailed account of common challenges and methods for overcoming these The reader is then encouraged to practice solving such problems for themselves by tackling a varied selection of questions and assignments of different levels of complexity This updated second edition now covers the design and analysis of algorithms using Python and features more than 50 new problems complete with solutions Topics and features provides a substantial collection of problems and examples of varying levels of difficulty suitable for both laboratory practical training and self study offers detailed solutions to each problem applying commonly used methods and computational schemes introduces the fundamentals of mathematical logic the theory of algorithms Boolean algebra graph theory sets relations functions and combinatorics presents more advanced material on the design and analysis of algorithms including Turing machines asymptotic analysis and parallel algorithms includes reference lists of trigonometric and finite summation formulae in an appendix together with basic rules for differential and integral calculus This hands on workbook is

an invaluable resource for undergraduate students of computer science informatics and electronic engineering Suitable for use in a one or two semester course on discrete mathematics the text emphasizes the skills required to develop and implement an algorithm in a specific programming language *Innovations in Communication Networks: Sustainability for Societal and Industrial Impact* Vikrant Bhateja, Vazeerudeen Abdul Hameed, Siba K. Udgata, Ahmad Taher Azar, 2025-07-11 This book includes selected papers presented at the 5th International Conference on Data Engineering and Communication Technology ICDECT 2024 held at Asia Pacific University of Technology and Innovation APU Kuala Lumpur Malaysia during 28 29 September 2024 It features advanced multidisciplinary research towards the design of smart computing information systems and electronic systems It also focuses on various innovation paradigms in system knowledge intelligence and sustainability which can be applied to provide viable solutions to diverse problems related to society the environment and industry
