among the best studied ecosystems in the world the application to them of environmental regulations such as the European Water Framework Directive is a challenging task and requires that several natural and management aspects specific to these water bodies are adequately considered These vulnerable ecosystems often suffer from accelerated eutrophication over fishing toxic contamination and invasive species Large lakes offer socio economic benefits and can be used in many ways and are often areas in which economic cultural and political interests overlap In this book the problems regarding the present status of European large lakes and the directions of change are discussed Threats caused by direct human impact and by climate change protection needs and restoration measures are considered
