The Impact of EPA's Green Power Purchases Joseph

F. DeCarolis, 2007 All federal agencies including EPA are required under Executive Order EO 13123 to reduce life cycle greenhouse gas emissions attributed to facility energy use by 30% below 1990 levels by 2010 A key approach to reducing facility greenhouse gas emissions employed by EPA's Office of Administration and Resources Management OARM involves the purchase of green power Green power generally includes renewables wind solar biomass and other clean energy technologies municipal solid waste and landfill gas that generate electricity Green tags which represent the positive environmental attributes associated with electricity production from green power sources are sold through markets to electricity consumers The analysis presented in this report meets the following three objectives 1 establish the 1990 EPA emissions baseline in order to assess progress towards fulfillment of EO 13123 2 examine the impact of EPA's green power purchasing on facility related greenhouse gas emissions and air pollution and 3 develop a strategy for future green power purchases In order to achieve these objectives this report describes a new method to estimate net emissions of CO₂ SO₂ NO_x and Hg The estimation of net facility emissions is complicated by the purchase of green tags because it requires detailed knowledge of which conventional power plants are being offset by purchased green power Different offset scenarios are analyzed in order to quantify the uncertainty inherent in estimating emissions offsets without hour by hour system dispatch data

Green power already out of breath? Why do German consumers not switch to green electricity? Sarah Herz, 2014-02-01 The following investigation provides a profound analysis on the motives that hinder German consumers from shifting to green power vendors While academic research provides many potential reasons only a few investigations have so far dealt with internal and external influences on switching behavior as well as actual compliance with theoretical models In this context a survey has been undertaken in the Federal State of Mecklenburg West Pomerania to analyze the personal relevance of different motives for consumers Furthermore the survey also aimed at analyzing the compliance of theoretical criteria provided by the Norm Activation Model and the Theory of Planned Behavior in order to see whether respondents intend to switch after all Therefore the survey was distributed via the snowball system and has been completed by 115 respondents providing data on 77 respondents who still consume conventional power
