Pharmacology and Aphasia Marcelo Berthier, Guadalupe Davila, 2016-04-14 This book provides clinicians and researchers with the current state of the art on the pharmacological treatment of aphasia. The focus is on the role of different pharmacological agents to improve aphasia associated with stroke and to attenuate language dissolution in degenerative conditions like Alzheimer's disease and primary progressive aphasia. This book is the first one that addresses these topics. Leaders in the field provide tutorial reviews on how focal brain injury and degeneration impact on the normal the activity of different neurotransmitter systems and how drugs combined or not with rehabilitation can improve language and communication deficits. This is nicely illustrated by studies on single cases and case series describing the beneficial effects of interventions combining drugs with evidence-based rehabilitation techniques. Throughout the volume future directions to refine testing aimed to detect gains in language and non language cognitive deficits promoted by drug treatment are highlighted. This book is essential reading for anyone interested in the rehabilitation of aphasia and related cognitive disorders. This book was originally published as a special issue of *Aphasiology*.

Biofeedback and the Modification of Behavior Aubrey J. Yates, 2012-12-06 In this book I have attempted to evaluate critically the very large literature which has accumulated in the area of biofeedback over the past 10-15 years. As might be expected in any area of psychology with clinical possibilities the literature divides itself into two main categories: fundamental research studies and therapeutic studies. It is now apparent that the clinical applications of biofeedback have far outstripped their fundamental research bases with the inevitable result that the initial wave of enthusiasm may be replaced with an unnecessarily severe skepticism. Either extreme position is unjustified. Biofeedback does represent an important new

approach to the elucidation of the role played by internal systems in the adjustment of the organism to its environment But its potential will only be revealed if its use in practice is soundly based on fundamental research There are promising signs that this is being realized so that there is cause for optimism Aubrey J Yates Perth Australia A Note on the References With the exception of no more than two or three papers all the references in this book have been obtained and read However many of them were published in journals which will not be readily accessible to the reader who may be interested in consulting more directly particular articles which attract his attention
