Guide to Bridge Hydraulics Roads and Transportation Association of Canada. Project Committee on Bridge Hydraulics, 1973 Guide to Bridge Hydraulics Roads and Transportation Association of Canada, Project Committee on Bridge Hydraulics Staff, 1975 *Practical Channel Hydraulics, 2nd edition* Donald W. Knight, Caroline Hazlewood, Rob Lamb, Paul G. Samuels, Koji Shiono, 2018-03-05 Practical Channel Hydraulics is a technical guide for estimating flood water levels in rivers using the innovative software known as the Conveyance and Afflux Estimation System CES AES The stand alone software is freely available at HR Wallingford's website www.riverconveyance.net The conveyance engine has also been embedded within industry standard river modelling software such as InfoWorks RS and Flood Modeller Pro This 2nd Edition has been greatly expanded through the addition of Chapters 6-8 which now supply the background to the Shiono and Knight Method SKM upon which the CES AES is largely based With the need to estimate river levels more accurately computational methods are now frequently embedded in flood risk management procedures as for example in ISO 18320 Determination of the stage discharge relationship in which both the SKM and CES feature The CES AES incorporates five main components A Roughness Adviser A Conveyance Generator an Uncertainty Estimator a Backwater Module and an Afflux Estimator The SKM provides an alternative approach solving the governing equation analytically or numerically using Excel or with the short FORTRAN program provided Special attention is paid to calculating the distributions of boundary shear stress distributions in channels of different shape and to appropriate formulations for resistance and drag forces including those on trees in floodplains Worked examples are given for flows in a wide range of channel types size shape cover sinuosity ranging from small scale laboratory flumes $Q = 2.0 \text{ m}^3/\text{s}$ to European rivers $2,000 \text{ m}^3/\text{s}$ and large scale world rivers $23,000 \text{ m}^3/\text{s}$ a 107 range in discharge Sites from rivers in the UK France China New Zealand and Ecuador are considered Topics are introduced initially at a simplified level and get progressively more complex in later chapters This book is intended for

post graduate level students and practising engineers or hydrologists engaged in flood risk management as well as those who may simply just wish to learn more about modelling flows in rivers

Fish Swimming in Turbulent Waters Hubert Chanson,Xinqian Leng,2020-09-13 Low level river crossings including culverts are important for delivering a range of valuable socioeconomic services including transportation and hydrological control These structures are also known to have negative impacts on freshwater river system morphology and ecology including the blockage of upstream fish passage particularly small body mass fish species Given the enormous environmental problems created by road crossings new hydraulic engineering guidelines are proposed for fish friendly multi cell box culvert designs The focus of these guidelines is on smooth box culverts without appurtenance with a novel approach based upon three basic concepts I the culvert design is optimized for fish passage for small to medium water discharges and for flood capacity for larger discharges II low velocity zones are provided along the wetted perimeter in the

culvert barrel and quantified in terms of a fraction of the wetted flow area where the local longitudinal velocity is less than a characteristic fish speed linked to swimming performances of targeted fish species and III the culvert barrel is smooth without any other form of boundary treatment and appurtenance The present monograph develops a number of practical considerations in particular relevant to box culvert operations for less than design discharges It is argued that upstream fish passage capabilities would imply a revised approach to maintenance in part linked to the targeted fish species This reference work is authored for civil and environmental engineers as well as biology and ecology scientists interested in culvert design While the book is aimed to professionals the material is also lectured in postgraduate courses and in professional short courses
