Management George “Buster” Barksdale,Kecia Pierce,2024-04-12 This book covers many helpful analysis tools and processes to assist energy managers EMs administer their energy program through their meter management system MMS These tools and the corresponding techniques offer opportunities for the EM to optimize their time If fully utilized the MMS will allow an EM to reduce field time significantly as they can perform most of the energy management pre analysis benchmarking data analysis and in many cases complete the task of performing a virtual audit remotely from their office The book covers many instructional areas that are for the most part only offered by consulting groups and software vendors as services Those two groups offer their services for fees and therefore do not publish their ideas or best practices for

commercial use Software vendors provide software analytics whose functional aspects are addressed by our descriptions of the essential tasks in each chapter This book allows EMs to expand their knowledge of software capabilities by viewing other best practices Consulting groups offer services in a few areas basic benchmarking and monitoring based commissioning MBCx These services are considered essential to energy management but are generally implemented as on site services which due to their nature are much more expensive than a monitoring commissioning MCx solution Monitoring commissioning in contrast to MBCx is purely done at the monitoring level and allows you to manage the critical energy measures that comprise the majority of the savings but without getting into the field testing Benchmarking is covered much deeper in the book as we show how to benchmark each system within a building The benchmarking sections show how to automatically analyze each system s usage into a separate benchmark for baseload lighting AC and fan pump systems These systems produce benchmarks so EMs can compare by site category type climate zone etc We also introduce benchmarks that enable the EM to utilize tools to determine the performance of each system and which are their most significant energy users These analytics functions are covered to produce results that identify potential energy savings for each energy system

Environmental Chemistry Stanley E Manahan, 2017-02-24 With clear explanations real world examples and updated questions and answers the tenth edition of Environmental Chemistry emphasizes the concepts essential to the practice of environmental science technology and chemistry while introducing the newest innovations in the field The author follows the general format and organization popular in preceding editions including an approach based upon the five environmental spheres and the relationship of environmental chemistry to the key concepts of sustainability industrial ecology and green chemistry This readily adaptable text has been revamped to emphasize important topics such as the world water crisis It details global climate change to a greater degree than previous editions underlining the importance of abundant renewable energy in minimizing human influences on climate Environmental Chemistry is designed for a wide range of graduate and undergraduate courses in environmental chemistry environmental science and sustainability as well as serving as a general reference work for professionals in the environmental sciences and engineering

Fundamentals of Environmental and Toxicological Chemistry Stanley E. Manahan, 2013-02-25 Fundamentals of Environmental and Toxicological Chemistry Sustainable Science Fourth Edition covers university level environmental chemistry with toxicological chemistry integrated throughout the book This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry It is organized based on the five spheres of Earth s environment 1 the hydrosphere water 2 the atmosphere air 3 the geosphere solid Earth 4 the biosphere life and 5 the anthrosphere the part of the environment made and used by humans The first chapter defines environmental chemistry and each of the five environmental spheres The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry Subsequent chapters are grouped by sphere beginning with the hydrosphere and its environmental chemistry water pollution

sustainability and water as nature's most renewable resource. Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment including climate pollution in and by the anthrosphere and means of sustaining this sphere. It also discusses renewable nonpolluting energy and introduces workplace monitoring. For readers needing additional basic chemistry background, the book includes two chapters on general chemistry and organic chemistry. This updated edition includes three new chapters, new examples and figures, and many new homework problems.
