Graphic Discovery A Trout In The Milk And Other Visual Adventures:

Graphic Discovery Howard Wainer, 2005 Good graphs make complex problems clear From the weather forecast to the Dow Jones average graphs are so ubiquitous today that it is hard to imagine a world without them Yet they are a modern invention This book is the first to comprehensively plot humankind s fascinating efforts to visualize data from a key seventeenth century precursor England s plague driven initiative to register vital statistics right up to the latest advances In a highly readable richly illustrated story of invention and inventor that mixes science and politics intrigue and scandal revolution and shopping Howard Wainer validates Thoreau s observation that circumstantial evidence can be quite convincing as when you find a trout in the milk The story really begins with the eighteenth century origins of the art logic and methods of data display which emerged full grown in William Playfair s landmark 1786 trade atlas of England and Wales The remarkable Scot singlehandedly popularized the atheoretical plotting of data to reveal suggestive patterns an achievement that foretold the graphic explosion of the nineteenth century with atlases published across the observational sciences as the language of science moved from words to pictures Next come succinct chapters illustrating the uses and abuses of this marvelous invention more recently from a murder trial in Connecticut to the Vietnam War s effect on college admissions Finally Wainer examines the great twentieth century polymath John Wilder Tukey s vision of future graphic displays and the resultant methods methods poised to help us make sense of the torrent of data in our information laden world

Testing the Data Warehouse Practicum Wayne Yadow Doug Vucevic &, 2012-08 The quality of a data warehouse DWH is the elusive aspect of it not because it is hard to achieve once we agree what it is but because it is difficult to describe We propose the notion that quality is not an attribute or a feature that a product has to possess but rather a relationship between that product and each and every stakeholder More specifically the relationship between the software quality and the organization that produces the products is explored Quality of data that populates the DWH is the main concern of the book therefore we propose a definition for data quality as fitness to serve each and every purpose Methods are proposed throughout the book to help readers achieve data warehouse quality

Handbook of Quantitative Criminology Alex R. Piquero, David Weisburd, 2009-12-16 Quantitative criminology has certainly come a long way since I was first introduced to a largely qualitative criminology some 40 years ago when I was recruited to lead a task force on science and technology for the President's Commission on Law Enforcement and Administration of Justice At that time criminology was a very limited activity depending almost exclusively on the Uniform Crime Reports UCR initiated by the FBI in 1929 for measurement of crime based on victim reports to the police and on police arrests A typical mode of analysis was simple bivariate correlation Marvin Wolfgang and colleagues were making an important advance by tracking longitudinal data on arrests in Philadelphia an innovation that was widely appreciated And the field was very small I remember attending my first meeting of the American Society of Criminology in about 1968 in an anteroom at New York University there were about 25-30 people in attendance mostly sociologists with a few lawyers thrown in That Society today has over 3,000 members mostly now drawn from criminology which has established its own clear identity but augmented by a wide variety of disciplines that include statisticians economists demographers and even a few engineers This

Handbook provides a remarkable testimony to the growth of that old Following the maxim that if you can't measure it you can't understand it we have seen the early dissatisfaction with the UCR replaced by a wide variety of new approaches to measuring crime victimization and offending
