you learn more effectively and offer valuable real world preparation for clinical practice Ocular Circulation and Neovascularization D. Benezra, N. Ryan, B.M. Glaser, R.P. Murphy, 2012-12-06 Neovascularization is a normal phase of tissue repair mechanism. In the eye, however, sprouting of new vessels within a vascular tissue and their great tendency to bleed have detrimental effects on vision. Diabetic retinopathy, corneal neovascularization, age related macular degeneration, retinal vein occlusion and retinopathy of prematurity are major causes of blindness. In all uncontrolled proliferation of new vessels is the underlying pathological cause leading to the inexorable loss of vision. Development of laser technologies and their wide use in ophthalmology have brought some hope for the treatment of these diseases. However, it became evident that direct closure of the new vessels and or ablation of large parts of the tissue are not ideal solutions to the problem. Recent advances in molecular biology and genetic engineering have fostered basic knowledge regarding the growth factors and intercellular messengers and their association with the proliferation of new blood vessels. These latter findings sparked a renewed interest in Michaelson's X factor of ocular neovascularization and opened avenues for possible innovative therapeutic approaches. Therefore, the suggestion to organize an international gathering of clinicians and scientists interested in problems of ocular circulation and neovascularization was received with great enthusiasm. Unanimously, it was decided to dedicate the symposium to Professor I.C. Michaelson, the innovative scientist, the great clinician, the indefatigable teacher and above all, the wonderful human being. The meeting was highlighted by the outstanding atmosphere of friendship and scientific exchanges. This book mirrors the information delivered and includes a selection of papers from the scientific program. The organization of this meeting and the publication of the book would not have been possible without the harmonious team efforts made by the International Scientific and Local Committees. I am thankful to the chairpersons of the various sessions for their time, keen interest and endeavor for the realization of a high scientific level. I also deeply acknowledge the help and support of Arnall Patz, Bob Murphy, Bert Glaser, Robert Frank, Larry Hjelmeland, Gordon Klintworth, Neville Welsh, Charles Riva, Alec Garner, Desmond Archer, Ephraim Friedman, Myron Yanoff, Moshe Lahav, Willem Manschot, Hans Walther Larsen and Masanobu Uyama. The powerful stimulus of Hanan Zauberman, Steve Ryan, Gabriel Coscas, Giselle Soubrane, Moshe Ivry, Yuval Yassur and Sue and Peter Ballen was most instrumental in the realization of these dreams. As always, I was fortunate to have the invaluable collaboration of my loyal assistants Evelyne Cohen, Genia Maftzir, Israel Barzel, Arie Zelikovitch and Judith Ben Ezra. The smooth running of the meeting and timely editing of the book could not have been possible without the incalculable help and indefatigable typing and council of Judith Fisher, whose seconded me in selecting the papers and editing the book.
