How Do You Merge Two Files Into One:

Mental Files François Recanati, 2012-12-06 François Recanati presents his theory of mental files a new way of understanding reference in language and thought He aims to recast the nondescriptivist approach to reference that has dominated the philosophy of language and mind in the late twentieth century According to Recanati we refer through mental files which play the role of so called modes of presentation The reference of linguistic expressions is inherited from that of the files we associate with them The reference of a file is determined relationally not satisfactionally so a file is not to be equated to the body of information it contains Files are like singular terms in the language of thought with a nondescriptivist semantics In contrast to other philosophers Recanati offers an indexical model according to which files are typed by their function which is to store information derived through certain types of relation to objects in the environment The type of the file corresponds to the type of contextual relation it exploits Even detached files or encyclopedia entries are based on epistemically rewarding relations to their referent on Recanati's account Among the topics discussed in this wide ranging book are acquaintance relations and singular thought cognitive significance the vehicle content distinction the nature of indexical concepts co reference de jure and judgments of identity cognitive dynamics recognitional and perceptual concepts confused thought and the transparency requirement on modes of presentation descriptive names and acquaintanceless singular thought the communication of indexical thoughts two dimensional defences of Descriptivism the Generality Constraint attitude ascriptions and the vicarious use of mental files first person thinking token reflexivity in language and thought

Mental Files in Perspective Josef Perner, 2025-07-25 Intellectual development is primarily considered a domain specific enterprise Children develop naive physics a folk psychology theory of mind a naive biology etc But understanding perspective is a general overarching phenomenon that cuts across such domains in development and in the brain This has important theoretical consequences For instance our folk psychology cannot consist of a uniform theory of mind for explaining behaviour Parts of the theory that are sensitive to perspective differences have to be separated from those that are not A central concern is how perspective is represented in the mind The answer comes from mental files theory A mental file represents or refers to an object It presents the object under a particular mode of presentation perspective Coreferential files refer to the same object and present the object under different perspectives Files thus give us a concrete way to capture perspectives with the tools for basic object cognition This book introduces mental files theory in relation to object files and discourse referents and then applies it to the development of perspective taking in early childhood and to brain imaging The theory goes well beyond perspective it is the theoretical tool for representing persisting objects tracking them over time and storing knowledge about them From a leading figure in developmental psychology this book addresses a topic much neglected in the cognitive sciences The Context and Content series is a forum for outstanding original research at the intersection of philosophy linguistics and cognitive science The general editor is Francois Recanati Institut Jean Nicod Paris
