Learning Disability Subtyping Stephen R. Hooper, W. Grant Willis, 2013-11-11 The publication of this very important volume comes at a timely juncture in the history of learning disabilities The focus of this volume is on developing a multidisciplinary understanding of the complexities of the research on learning disabilities and its various sUbtypes It also will serve as an important compendium of the subtyping literature particularly with respect to pertinent issues of nosology specific sUbtotyping models neuro psychological diagnosis and treatment As the authors so correctly suggest the differential diagnosis of learning disabilities subtypes is a critical first step in developing theoretically sound programs of psychoeducational intervention Clearly one must have some idea about the general abilities of a child before realistic expectations can be charted Also how can one plan a program of intervention without some knowledge of the deficient components of achievement within a do main Does it not make both conceptual and practical sense to identify an individual s relative strengths and weaknesses so that abilities or strengths can be utilized to optimize functioning in areas of deficit Although these all sound like reasonable precursors to assisting individuals in need of

academic assistance there are those who would argue otherwise Importantly however the Director of the National Institutes of Health in a recent report to Congress advocates exactly what this volume proposes Indeed there are important needs to be addressed and the literature reviewed herein strongly supports the conclusions drawn by these authors

Assessment Issues in Child Neuropsychology Michael G. Tramontana, Stephen R. Hooper, 2013-11-21 Neuropsychology has its roots in clinical neurology Reading case descriptions by 19th century neurologists such as Wernicke's painstakingly detailed examinations of patients with the aphasic symptom complex makes it obvious that neuropsychology is not a new discipline Even the marriage with psychology is not new the neurologist Arnold Pick for example was fully conversant with the developments in

contemporary psychological as well as linguistic research. However, the primary focus of 19th and early 20th century psychology was on general psychology and only a small number of psychologists ventured into what then was called differential psychology, the psychology of individual differences, including a few who became attached to neurological research and rehabilitation units after World War I. It remained until World War II for psychologists to establish a more solid working relationship with neurology. What psychology had to offer to neurology was its experimental skill, the development of a sophisticated methodology, and for clinical work, the development of psychometrics. On the whole, the marriage between the two disciplines has been fruitful, leading to new insights, models, and discoveries about brain-behavior relationships, documented in several textbooks which appeared in rapid succession since the 1960s. In clinical practice, neuropsychology has been inventive in some respects, in others merely introducing psychometric rigor to already existing neurological examinations. As described in greater detail in this book, developmental neuropsychology is of even more recent origin.
