Science, Society and Power James Fairhead, Melissa Leach, 2003-10-16 In this book James Fairhead and Melissa Leach bring science to the heart of debates about globalisation exploring transformations in global science and contrasting effects in Guinea one of the world's poorest countries and Trinidad a more prosperous industrialised and urbanised island The book focuses on environment forestry and conservation sciences that are central to these countries and involve resources that many depend upon for their livelihoods It examines the relationships between policies bureaucracies and particular types of scientific enquiry and

explores how ordinary people the media and educational practices engage with this In particular it shows how science becomes part of struggles over power resources and legitimacy The authors take a unique ethnographic perspective linking approaches in anthropology development and science studies They address critically prominent debates in each and explore opportunities for new forms of participation public engagement and transformation in the social relations of science

Encyclopedia of Biodiversity ,2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

Indian Hotspots Chandrakasan Sivaperuman,Krishnamoorthy Venkataraman,2018-02-01 This book offers a comprehensive account of India s four biodiversity hotspots the Himalaya Indo Burma Western Ghats and Sri Lanka and Andaman and Nicobar Islands With a focus on tropical rainforests it includes more than 30 chapters covering different vertebrate fauna e g fishes amphibians reptiles birds and mammals as well as topics such as conservation and management aspects Written by experts in the field of biodiversity conservation and management it offers ample new insights into a number of subjects related to the faunal communities of tropical forest ecosystems providing a valuable resource for conservationists and researchers in the field of flora and fauna diversity

Key Topics in Conservation Biology 2 David W. Macdonald,Katherine J. Willis,2013-02-06 Following the much acclaimed success of the first volume of Key Topics in Conservation Biology this entirely new second volume addresses an innovative array of key topics in contemporary conservation biology Written by an internationally renowned team of authors Key Topics in Conservation Biology 2 adds to the still topical foundations laid in the first volume

published in 2007 by exploring a further 25 cutting edge issues in modern biodiversity conservation including controversial subjects such as setting conservation priorities balancing the focus on species and ecosystems and financial mechanisms to value biodiversity and pay for its conservation Other chapters setting the framework for conservation address the sociology and philosophy of peoples relation with Nature and its impact on health and such challenging practical issues as wildlife trade and conflict between people and carnivores As a new development this second volume of Key Topics includes chapters on major ecosystems such as forests islands and both fresh and marine waters along with case studies of the conservation of major taxa plants butterflies birds and mammals A further selection of topics consider how to safeguard the future through monitoring reserve planning corridors and connectivity together with approaches to reintroduction and re wilding along with managing wildlife disease A final chapter by the editors synthesises thinking on the relationship between biodiversity conservation and human development Each topic is explored by a team of top international experts assembled to bring their own cross cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives The interdisciplinary nature of biodiversity conservation is reflected throughout the book Each essay examines the fundamental principles of the topic the methodologies involved and crucially the human dimension In this way Key Topics in Conservation Biology 2 like its sister volume Key Topics in Conservation Biology embraces issues from cutting edge ecological science to policy environmental economics governance ethics and the practical issues of implementation Key Topics in Conservation Biology 2 will like its sister volume be a valuable resource in universities and colleges government departments and conservation agencies It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and wider ecological and environmental subjects and those taking Masters degrees in any field relevant to conservation and the environment Conservation practitioners policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable

Tropical Biology and Conservation Management - Volume I Kleber Del Claro, Paulo S. Oliveira, Victor Rico-Gray, 2009-05-11 This Encyclopedia of Tropical Biology and Conservation Management is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Tropical environments cover the most part of still preserved natural areas of the Earth The greatest biodiversity as in terms of animals and plants as microorganisms is placed in these hot and rainy ecosystems spread up and below the Equator line Additionally the most part of food products with vegetal or animal origin that sustain nowadays human beings is direct or undirected dependent of tropical productivity Biodiversity should be looked at and evaluated not only in terms of numbers of species but also in terms of the diversity of interactions among distinct organisms that it maintains In this sense the complexity of web structure in tropical systems is a promise of future to nature preservation on Earth In the chemicals of tropical plant and animals could be the cure to infinite number of diseases new food sources and who knows what more Despite these facts tropical areas have been exploited in an

irresponsible way for more than 500 years due the lack of an ecological conscience of men Exactly in the same way we did with temperate areas and also tropical areas in the north of Equator line Nowadays is estimated that due human exploitation nation conflicts and social problems less than 8% of tropical nature inside continental areas is still now untouchable The extension of damage in the tropical areas of oceans is unknown Thus so all knowledge we could accumulate about tropical systems will help us as in the preservations of these important and threatened ecosystems as in a future recuperation when it was possible Only knowing the past and developing culture mainly that directed to peace to a better relationship among nations and responsible use and preservation of natural resources human beings will have a long future on Earth These volumes Tropical Biology and Natural Resources was divided in sessions to provide the reader the better comprehension possible of issue and also to enable future complementation and improvements in the encyclopedia Like we work with life we intended to transform this encyclopedia also in a life volume in what new information could be added in any time As president of the encyclopedia and main editor I opened the theme with an article titled Tropical Biology and Natural resources Historical Pathways and Perspectives providing the reader an initial view of the origins of human knowledge about the tropical life and what we hope to the future In the sequence we have more than 100 chapters distributed in tem sessions Tropical Ecology TE Tropical Botany TB Tropical Zoology TZ Savannah Ecosystems SE Desert Ecosystems DE Tropical Agriculture TA Natural History of Tropical Plants NH Human Impact on Tropical Ecosystems HI Tropical Phytopathology and Entomology TPE Case Studies CS This 11 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It is the only publication of its kind carrying state of the art knowledge in the fields of Tropical Biology and Conservation Management and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs

Ark of the Broken Covenant John Charles Kunich,2003-02-28 Blending scientific and legal expertise Kunich proves that a devastating ecological crisis is imminent or even underway already and that conservation law has yet to catch up with biological science He challenges readers with a hotspots wager arguing that he have vastly more to gain than lose by legally protecting biological hotspots and that foregoing them in favor of the relatively minor and immediate returns arising from their devastation is both foolish and ultimately dangerous Legal thought lags behind modern science in focusing on and setting priorities for global conservation An extinction spasm is imminent many scientists argue due to the ongoing global devastation of biological hotspots home to a disproportionate share of all life forms including perhaps millions of unknown species These hotspots have already lost 88 percent of their primary vegetation and are likely to lose much more yet few legal measures exist to protect them Environmental legal protections are often incomprehensive and feebly enforced Even worse 62 percent of all hotspots are unprotected Kunich provides a brief history and science of extinction He discusses the importance of saving species from

extinction and analyzes the legal measures directed toward preserving biodiversity in nations that harbor hotspots

Biodiversity Conservation and Habitat Management - Volume I Franccesa Gherardi, Claudia Corti, Manuela Gualtieri, 2009-12-29 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human induced changes in the global environment The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human abuse of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency Disseminating information raising awareness and propelling concern within a diversified target audience general public schools local authorities and government agencies are also essential to develop shared responsibility and to encourage collaborative efforts and compliance This has been the main objective of Biodiversity Conservation and Habitat Management The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion and is focused on 1 History and Overview of Biodiversity Conservation and Protected Areas 2 Management of Forests and other Wooded Habitats 3 Management of Savannahs and Other Open Habitats 4 Management of Wetlands 5 Management of Tourism and Human Recreation Pressure 6 Conservation Strategies Species Action Plans and Translocation 7 Captive Breeding and Gene Banks and 8 Eradication and Control of Invasive Species These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Biodiversity Hotspots Frank E. Zachos, Jan Christian Habel, 2011-09-15 Biodiversity and its conservation are among the main global topics in science and politics and perhaps the major challenge for the present and coming generations This book written by international experts from different disciplines comprises general chapters on diversity and its measurement human impacts on biodiversity hotspots on a global scale human diversity itself and various geographic regions exhibiting high levels of diversity The areas covered range from genetics and taxonomy to evolutionary biology biogeography and the social sciences In addition to the classic hotspots in the tropics the book also highlights various other ecosystems harbouring unique species communities including coral reefs and the Southern Ocean The approach taken considers but is not limited to the original hotspot definition sensu stricto and presents a chapter introducing the 35th hotspot the forests of East Australia While due to a bias in data availability the majority of contributions on particular taxa deal with vertebrates and plants some also deal with the less studied invertebrates This book will be essential reading for anyone involved with biodiversity particularly researchers and practitioners in the fields of conservation biology ecology and evolution **Asia** Kevin

Hillstrom, Laurie Collier Hillstrom, 2003-06-23 A concise yet thorough overview of the environmental issues problems and controversies facing the world's largest and most populous continent Asia Asia tackles the tough issues the complex problems and the political controversies surrounding the environment of this vast landmass This volume encompasses everything from economics land use energy and transportation to air pollution rivers and lakes oceans and species and habitat protection In Malaysia unchecked discharges of industrial waste and human sewage led the government to label 42 of its rivers officially dead According to some estimates Southeast Asia alone accounts for more than half of the world's total transport of sediment to the oceans In the Philippines the Chico River dam project which would have subjected 100 000 tribespeople to relocation was canceled when the World Bank withdrew funding after fierce resistance from the indigenous people This fascinating book offers a comprehensive look at how the most populated continent on earth contends with its complicated environment *The Environment* Mohan K. Wali, Fatih Evrendilek, M. Siobhan Fennessy, 2009-07-30 Strongly grounded in the scientific method and evidence The Environment Science Issues and Solutions presents an organized accessible building block approach that introduces the principles of ecology This book examines the effects of technology use and the unprecedented economic growth and development that has tipped the natural balance of the environment resulting in serious local regional and global environmental problems This comprehensive text explores the need for interrelated long term solutions for the prevention and mitigation of environmental problems **Final Environmental Impact Report/environmental Impact Statement** , 2002 Imperial Irrigation District Water Conservation and Transfer Project and Draft Habitat Conservation Plan , 2002 **Ecology & Environment Quick Revision Material for UPSC & State PSC General Studies Exams** Disha Experts, 2021-08-01
