Wizards, Aliens,

and Starships Charles L. Adler, 2014-02-02 Explaining the science behind science fiction and fantasy from the probable to the impossible From teleportation and space elevators to alien contact and interstellar travel science fiction and fantasy writers have come up with some brilliant and innovative ideas Yet how plausible are these ideas for instance could Mr Weasley's flying car in the Harry Potter books really exist Which concepts might actually happen and which ones wouldn't work at all Wizards Aliens and Starships delves into the most extraordinary details in science fiction and fantasy such as time warps shape changing rocket launches and illumination by floating candle and shows readers the physics and math behind the phenomena With simple mathematical models and in most cases using no more than high school algebra Charles Adler ranges across a plethora of remarkable imaginings from the works of Ursula K Le Guin to Star Trek and Avatar to explore what might become reality Adler explains why fantasy in the Harry Potter and Dresden Files novels cannot adhere strictly to scientific laws and when magic might make scientific sense in the muggle world He examines space travel and wonders why it isn't cheaper and more common today Adler also discusses exoplanets and how the search for alien life has shifted from radio communications to space based telescopes He concludes by investigating the future survival of humanity and other intelligent races Throughout he cites an abundance of science fiction and fantasy authors and includes concise descriptions of stories as well as an appendix on Newton's laws of motion Wizards Aliens and Starships will speak to anyone wanting to know about the correct and incorrect science of science fiction and fantasy

The UK Regional-National Economic Problem Philip McCann, 2016-03-10 In recent years the United Kingdom has become a more and more divided society with inequality between the regions as marked as it has ever been In a landmark analysis of the current state of Britain's regional development Philip McCann utilises current statistics examines historical trends and makes pertinent international comparisons to assess the state of the nation The UK Regional National Economic Problem brings attention to the highly centralised top down governance structure that the UK deploys and demonstrates that it is less than ideally placed to rectify these inequalities The North South divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity incomes employment status and wealth Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland in contrast the Midlands the North of England Northern Ireland and Wales lag behind by most measures of prosperity This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored The UK's economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends although this definitive study suggests that some areas of improvement are possible if they are well implemented This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government

Navigating The Digital Shift: Implementation Strategies for Blended and Online Learning John

Bailey, Carri Schneider, Tom Vander Ark, 2013-10-09 Our nation's schools stand at an important inflection point in the history of education. Taken together, the implementation of common college and career standards, the shift to next generation assessments, the availability of affordable devices, and the growing number of high quality digital instructional tools create an unprecedented opportunity to fundamentally shift the education system to personalize learning around the individual needs of every student. Digital Learning Now (DLN), a national initiative under the Foundation for Excellence in Education (ExcelinEd) in association with Getting Smart, brings *Navigating the Digital Shift: Implementation Strategies for Blended and Online Learning* to readers interested in exploring the implementation challenges at the intersection of these shifts. Co-authored by John Bailey, Carri Schneider, and Tom Vander Ark, *Navigating the Digital Shift* offers updated versions of the eight papers originally released in the DLN Smart Series, including contributions from 11 additional co-authors representing leading organizations such as Public Impact, the International Association for K-12 Online Learning (iNACOL), and The Learning Accelerator. Topics include blended learning, implementation, teaching conditions, and careers; competency-based learning; student data; online learning myths; and student-based funding. Jeb Bush, Governor of Florida from 1999-2007 and Chairman of ExcelinEd, contends that the book provides policymakers and education leaders the tools they need to use digital learning as a catalyst for improved student achievement. AASA 2013 Superintendent of the Year Dr. Mark Edwards believes the collection provides meaningful, practical, and poignant advice, as well as commentary regarding the move to college and career-ready standards associated with the shift to personal online learning and digital resources. Rhode Island's Commissioner of Elementary and Secondary Education, Deborah Gist, describes the book as an invaluable resource that will help educators re-imagine what our schools can look like and what our students can accomplish.

Geometric Methods in PDE's Giovanna Citti, Maria Manfredini, Daniele Morbidelli, Sergio Polidoro, Francesco Uguzzoni, 2015-10-31 The analysis of PDEs is a prominent discipline in mathematics research, both in terms of its theoretical aspects and its relevance in applications. In recent years, the geometric properties of linear and nonlinear second-order PDEs of elliptic and parabolic type have been extensively studied by many outstanding researchers. This book collects contributions from a selected group of leading experts who took part in the INdAM meeting *Geometric methods in PDEs* on the occasion of the 70th birthday of Ermanno Lanconelli. They describe a number of new achievements and/or the state of the art in their discipline of research, providing readers an overview of recent progress and future research trends in PDEs. In particular, the volume collects significant results for sub-elliptic equations, potential theory, and diffusion equations, with an emphasis on comparing different methodologies and on their implications for theory and applications.
