Nubé, Muriel P.C. Grooteman, Peter J. Blankestijn, 2015-11-10 This book gives a complete description of online hemodiafiltration in five sections It is unique in the systematic and complete way in which hemodiafiltration is described Each chapter is completed by a point to point summary of essential information in a

separate text box Part of the book is dedicated to the theoretical background of convective clearance In this part safety issues and quality control is reviewed especially on the quality of water for dialysis and substitution fluid as well as equipment both dialyzers and machines with which this treatment can be performed As recently the results of several randomized controlled trials were available the effect of hemodiafiltration on hard clinical end points mortality and morbidity is discussed in detail This has not been done before as the most recent book journal on hemodiafiltration was published in 2011 before the results of the 3 randomized controlled trials were published Furthermore the methodological quality of the trials is discussed by an expert in order to help the readers in their judgment of the trials Part of the book concentrates on the effect of the treatment on several biomarkers and uremic toxins Several clinically relevant issues is discussed separately such as the prescription of anticoagulation during the treatment drug prescription and clearance for patients treated with hemodiafiltration and hemodynamic stability Finally a practical guide on how to perform the treatment is provided In this unique section seemingly simple but important details of hemodiafiltration treatment is discussed such as the importance of needle size for blood flow rates the difference between filtration fraction and substitution ratio the different targets that can be set and how to reach them As most literature is mainly focused on theoretical issues this unique feature really will help the field to perform hemodiafiltration and answer practical questions

On-line Hemodiafiltration Gerd Krick, Claudio Ronco, 2011 A history and outlook On line HDF represents a major technical development in the delivery of hemodialysis therapy It combines the properties of increased diffusion available in current high flux membranes with convective removal of between 6 and 30 liters per treatment and requires the use of ultrapure water and online filtration of replacement fluid On line HDF has been successfully introduced in Europe and Asia and is routinely prescribed for dialysis patients in these regions The book at hand summarizes the history and achievements of on line HDF in four parts A report of the technological development in both machine and fiber dialyzer is followed by a description of the challenges encountered in the evolution of on line HDF collecting the accounts of clinical key opinion leaders who had been involved in its early application The third part presents a comprehensive review of the clinical results achieved with on line HDF from its inception to the present times in which it represents the clinical golden standard The fourth and final part is dedicated to on line HDF as a vision for the future

Arteriovenous Hemofiltration Peter Kramer,2012-12-06 Discovery and Relative Importance of Continuous Arteriovenous Hemofiltration Lee W Henderson Continuous arteriovenous hemofiltration CAVH has seen a brisk upswing in popularity in Europe since its introduction by Dr Kramer and colleagues from Gottingen West Germany in 1977 1 In the United States the technique received approval as a clinical tool from the Food and Drug Administration in April 1982 This approval flowed in no small measure from the extensive experience reported from Europe and in particular West Germany e g 2 3 Reports of its clinical utility now have begun to appear in the United States 4 Removal of excess total body water using synthetic membranes in an extracorporeal circuit dates back to the work of Alwall and the artificial kidney that he designed which permitted utilization of a hydrostatic pressure gradient to motivate water flow across the membrane 5 Kolff's original rotating drum with its unencased membrane required an osmotic driving force 6 Hemofiltration the use of the filtration process to remove uremic solutes with the artificial kidney in analogy with the glomerulus was reported in 1967 7 This was made possible by the availability of synthetic membranes with far higher hydraulic permeability approximately 10 times higher than conventionally used cellulosic hemodialysis membrane Specific applications of these high flux membranes to the removal primarily of excess total body water followed shortly thereafter 8 **Hemodialysis Manual** Jerry P.
