Energy Systems of Complex Buildings Andrzej Ziębik, Krzysztof Hoinka, 2012-10-12 The production and consumption of energy carriers in complex buildings take place within the network of interconnected energy processes For this reason a change carried out in one energy process influences other energy processes Therefore all balance equations of energy carriers should be investigated as a whole and energy management of complex buildings creates a large energy system with internal relationships between energy installations and the equipment as well as external relationships with the environment Energy Systems of Complex Buildings presents the system approach to the energy ecological analysis of energy management in complex buildings Mathematical models of balancing the direct energy consumption as well as cumulative energy consumption and cumulative emission of noxious substances are based on input output analysis Algorithms devoted to system analysis in the exploitation of energy management of complex buildings are included In the case of ecological analysis a new approach is presented basing on the idea of thermoecological costs In this way two groups of noxious influence depletion of non renewable energy resources and emissions of noxious substances are taken into account The LCA energy ecological analysis of complex buildings has also been presented Students building designers energy auditors and researchers will learn the methodology of evaluating the energy and ecological effects by applying new technologies and devices in buildings which influence future investigations concerning the energy and ecological analysis of complex buildings

HVAC for Agricultural and Vertical Farming: Optimizing Climate Control for Sustainable Crop Production Charles Nehme , The growing demand for food combined with the challenges of climate change urbanization and limited arable land has propelled the development of innovative farming methods Among these controlled environment agriculture CEA and vertical farming are at the forefront offering solutions that allow crops to be grown in urban settings and regions where traditional farming is not viable A crucial aspect of these advanced agricultural practices is the effective management of indoor climates a role that HVAC Heating Ventilation and Air Conditioning systems play The design installation and maintenance of HVAC systems for agricultural and vertical farming environments are far from conventional These systems must be able to precisely control temperature humidity CO2 levels and airflow to optimize plant

Energy-efficient Buildings in India Mili Majumdar,2001-01-01 Accelerated urbanization imposes immense pressure on the dwindling energy sources and fragile ecosystems Yet the resource crunch confronting energy supplies can be alleviated if we design and develop future buildings by incorporating sound concepts of energy efficiency and sustainability Covering 41 projects from India s various climatic zones this book provides thorough insights into the context techniques and benefits of energy efficient buildings The projects highlight design responses to varied climatic conditions appropriate materials and construction methods implementation of energy efficient systems and effective utilization of renewable energy to reduce pressure on grid power This book will inspire architects designers urban planners engineers and students to build for a better tomorrow

Solution Sets for Net Zero Energy Buildings Françios Garde,Joseph Ayoub,Laura Aelenei,Daniel Aelenei,Alessandra Scognamiglio,2017-03-01 Net Zero Energy Buildings have been the object of numerous studies in recent years as various countries have set this performance level as a long term goal of their energy policies This book presents a unique study of 30 NZEBs that have been constructed and have had their performance measured for at least 12 months The study is based upon an international collaborative research initiated by the International Energy Agency the Solar Heating and Cooling Programme SHC It is the first book to evaluate building strategies in houses educational buildings and offices that have been demonstrated to work in practice It examines how the design challenges of climate and building type have been addressed and to what extent the various design approaches have been successful This book presents convincing evidence that a careful re thinking of conventional design norms can achieve a far greater performance benefit than is normally feasible It identifies solution sets that work at the whole building level and at the individual building design challenge level for each climate and building type In doing so the book provides guidance as to how to improve the design by learning from these cases Unusually for a book of this type it has examples of buildings in what are conventionally labeled hot and cold climates A simple process is proposed for the reader to commission the analysis of their own climate to assess not only the conventional measure of how hot or cold or humid it is but also to assess its suitability to support other NZEB technical challenge solutions sets such as Daylight or Natural Ventilation or comfort based climate conditioning

Cost Optimal and Nearly Zero-Energy Buildings (nZEB) Jarek Kurnitski,2013-11-20 Cost optimal and nearly zero energy performance levels are principles initiated by the European Union s EU Energy Performance of Buildings Directive which was recast in 2010 These will be major drivers in the construction sector in the next few years because all

new buildings in the EU from 2021 onwards are expected to be nearly zero energy buildings nZEB This book introduces the technical definitions system boundaries energy calculation methodology and input data needed to set primary energy based minimum cost optimal and nZEB requirements in national energy frames Worked examples are provided to illustrate the calculation of delivered exported and primary energy and renewable energy contribution Five case studies of high performance nZEB office buildings across Europe are reported to show alternative technical solutions and to draw some general design rules based on completed nZEB buildings Specific features of the nZEB design process especially in the early stages and architectural competitions are included These describe important design issues in the scoping and conceptual design phase allowing design streams to be controlled so that specified targets can be met This book is intended for readers who need to be aware of or are working with the energy performance of buildings for decision makers in public and private sectors architects engineers construction clients consultants contractors manufacturers and students The editor of this book Professor Jarek Kurnitski has made major contributions to the preparation of the European REHVA nZEB technical definition and has developed energy calculation frames for current Estonian and Finnish energy performance regulations He is the leader of nZEB research at Tallinn University of Technology in Estonia and Aalto University in Finland and he has over 300 publications

The

Environmental Performance of Tall Buildings Joana Carla Soares Goncalves, 2010-09-23 Tall buildings represent one of the most energy intensive architectural typologies while at the same time offering the high density work and living conditions that many believe will be an important constituent of future sustainable communities. How then can their environmental impact be lessened? This insightful book takes in an overview of the tall building and its impacts looking at cityscape, place, mobility, microclimate, energy and economics, design principles and the development of the sustainable tall building, global perspectives covering North and South America, Europe, the Middle East and Asia, detailed qualitative case studies of buildings in design and operation, the future for sustainable tall buildings. Not simply another showcase for future utopian designs and ideals, the information presented here is based on hard research from operating buildings. Highly illustrated and combining analysis with solid detail for practice, this is essential reading for architects, building engineers, design consultants, retrofitters and urban planners interested in or working with tall buildings and researchers, students in these disciplines.
