Guesstimation Solving The Worlds Problems On The Back Of A Cocktail Napkin:

Guesstimation Lawrence Weinstein, John Adam, 2009-02-09 Guesstimation is a book that unlocks the power of approximation it's popular mathematics rounded to the nearest power of ten The ability to estimate is an important skill in daily life More and more leading businesses today use estimation questions in interviews to test applicants abilities to think on their feet Guesstimation enables anyone with basic math and science skills to estimate virtually anything quickly using plausible assumptions and elementary arithmetic Lawrence Weinstein and John Adam present an eclectic array of estimation problems that range from devilishly simple to quite sophisticated and from serious real world concerns to downright silly ones How long would it take a running faucet to fill the inverted dome of the Capitol What is the total length of all the pickles consumed in the US in one year What are the relative merits of internal combustion and electric cars of coal and nuclear energy The problems are marvelously diverse yet the skills to solve them are the same The authors show how easy it is to derive useful ballpark estimates by breaking complex problems into simpler more manageable ones and how there can be many paths to the right answer The book is written in a question and answer format with lots of hints along the way It includes a handy appendix summarizing the few formulas and basic science concepts needed and its small size and French fold design make it conveniently portable Illustrated with humorous pen and ink sketches Guesstimation will delight popular math enthusiasts and is ideal for the classroom Analytical Skills for AI and Data Science Daniel Vaughan, 2020-05-21

While several market leading companies have successfully transformed their business models by following data and AI driven paths the vast majority have yet to reap the benefits How can your business and analytics units gain a competitive advantage by capturing the full potential of this predictive revolution This practical guide presents a battle tested end to end method to help you translate business decisions into tractable prescriptive solutions using data and AI as fundamental inputs Author Daniel Vaughan shows data scientists analytics practitioners and others interested in using AI to transform their businesses not only how to ask the right questions but also how to generate value using modern AI technologies and decision making principles You'll explore several use cases common to many enterprises complete with examples you can apply when working to solve your own issues Break business decisions into stages that can be tackled using different skills from the analytical toolbox Identify and embrace uncertainty in decision making and protect against common human biases Customize optimal decisions to different customers using predictive and prescriptive methods and technologies Ask business questions that create high value through AI and data driven technologies **Millions, Billions, Zillions** Brian W. Kernighan, 2020-11-10

Numbers are often intimidating confusing and even deliberately deceptive especially when they are really big The media loves to report on millions billions and trillions but frequently makes basic mistakes or presents such numbers in misleading ways And misunderstanding numbers can have serious consequences since they can deceive us in many of our most important decisions including how to vote what to buy and whether to make a financial investment In this short accessible

enlightening and entertaining book leading computer scientist Brian Kernighan teaches anyone even diehard math phobes how to demystify the numbers that assault us every day With examples drawn from a rich variety of sources including journalism advertising and politics Kernighan demonstrates how numbers can mislead and misrepresent In chapters covering big numbers units dimensions and more he lays bare everything from deceptive graphs to speciously precise numbers And he shows how anyone using a few basic ideas and lots of shortcuts can easily learn to recognize common mistakes determine whether numbers are credible and make their own sensible estimates when needed Giving you the simple tools you need to avoid being fooled by dubious numbers Millions Billions Zillions is an essential survival guide for a world drowning in big and often bad data Jacket

Fly By Night Physics A. Zee, 2020-10-27 The essential primer for physics students who want to build their physical intuition Presented in A Zee's incomparably engaging style this book introduces physics students to the practice of using physical reasoning and judicious guesses to get at the crux of a problem An essential primer for advanced undergraduates and beyond Fly by Night Physics reveals the simple and effective techniques that researchers use to think through a problem to its solution or failing that to smartly guess the answer before starting any calculations In typical physics classrooms students seek to master an enormous toolbox of mathematical methods which are necessary to do the precise calculations used in physics Consequently students often develop the unfortunate impression that physics consists of well defined problems that can be solved with tightly reasoned and logical steps Idealized textbook exercises and homework problems reinforce this erroneous impression As a result even the best students can find themselves completely unprepared for the challenges of doing actual research In reality physics is replete with back of the envelope estimates order of magnitude guesses and fly by night leaps of logic Including exciting problems related to cutting edge topics in physics from Hawking radiation to gravity waves this indispensable book will help students more deeply understand the equations they have learned and develop the confidence to start flying by night to arrive at the answers they seek For instructors a solutions manual is available upon request

Physical Biology of the Cell Rob Phillips, Jane Kondev, Julie Theriot, Hernan Garcia, 2012-10-29 Physical Biology of the Cell is a textbook for a first course in physical biology or biophysics for undergraduate or graduate students It maps the huge and complex landscape of cell and molecular biology from the distinct perspective of physical biology As a key organizing principle the proximity of topics is based on the physical concepts that

Educational Paths to Mathematics Uwe Gellert, Joaquim Giménez Rodríguez, Corinne Hahn, Sonia Kafoussi, 2015-05-18 This book offers fresh insight and understanding of the many ways in which children youth and adults may find their paths to mathematics The chapters of the volume offer and analyse promising new ways into mathematics The focus is on spaces and modalities of learning dialogue and inquiry embodiment and aesthetic experience information and communication technology and on the use of mathematics in public communication The chapters present new mathematical activities and conceptions enriching the repertoire of mathematics education practices Critical commentaries discuss the innovative potential of the

new approaches to the teaching and learning of mathematics As a consequence the commentaries point to requirements and open issues in the field of research in mathematics education The volume is remarkably international Teachers and researchers from 14 countries authored 21 chapters and 7 commentaries The reader is invited to reflect on the particular effect of presenting avenues to mathematics contrived in diverse national settings in which the praxis of mathematics education might look different compared to what happens in the reader's place The book starts a series of sourcebooks edited by CIEAEM the Commission Internationale pour l'Etude et l'Amélioration de l'Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education The Engineering Design of Systems

Dennis M. Buede, William D. Miller, 2024-03-14 The Engineering Design of Systems Comprehensive resource covering methods to design, verify and validate systems with a model based approach addressing engineering of current software centric systems The newly revised and updated Fourth Edition of The Engineering Design of Systems includes content addressing model based systems engineering, digital engineering, digital threads, AI, SysML 1.0 and 2.0, digital twins and GENESYS software The authors explore system and software centric architecture, allocations and logical and physical architecture development including revised terminologies for a variety of subsections throughout Composed of 15 chapters, this book includes important new sections on modeling approaches for middle out engineering, reverse engineering and agile systems engineering with a separate section on emerging trends within systems engineering to explore the most up to date methods The authors include comprehensive diagrams and a separate chapter on a complete exercise of the System Engineering process ranging from the operational concept to integration and qualification To aid in reader comprehension and retention of concepts the text is embedded with problems at the end of each chapter along with relevant case studies Sample topics covered in The Engineering Design of Systems include Structural system models to executable models, verification and validation on systems of systems and external systems and context modeling, Digital engineering, digital threads, artificial augmented intelligence, AI, stakeholder requirements and scientific foundations for systems engineering, Quantifying a context and external systems model including intended and unintended inputs both deterministic and non deterministic, Functional architecture development, logical and physical architecture development, allocated architecture development, interface design and decision analysis for design trades The Engineering Design of Systems is highly suitable as a main text for undergraduate and graduate students studying courses in system engineering, design, systems architecture and systems integration The text is also valuable as a reference for practicing system architects, systems engineers, industrial engineers, engineering management professionals and systems integrators **Data Analysis with Open Source Tools**

Philipp K. Janert, 2010-11-11 Collecting data is relatively easy but turning raw information into something useful requires that you know how to extract precisely what you need With this insightful book intermediate to experienced programmers interested in data analysis will learn techniques for working with data in a business environment You'll learn how to look at

data to discover what it contains how to capture those ideas in conceptual models and then feed your understanding back into the organization through business plans metrics dashboards and other applications Along the way you ll experiment with concepts through hands on workshops at the end of each chapter Above all you ll learn how to think about the results you want to achieve rather than rely on tools to think for you Use graphics to describe data with one two or dozens of variables Develop conceptual models using back of the envelope calculations as well asscaling and probability arguments Mine data with computationally intensive methods such as simulation and clustering Make your conclusions understandable through reports dashboards and other metrics programs Understand financial calculations including the time value of money Use dimensionality reduction techniques or predictive analytics to conquer challenging data analysis situations Become familiar with different open source programming environments for data analysis Finally a concise reference for understanding how to conquer piles of data Austin King Senior Web Developer Mozilla An indispensable text for aspiring data scientists Michael E Driscoll CEO Founder Dataspora

Third Millennium Thinking Saul Perlmutter,John Campbell,Robert MacCoun,2024-03-26 Based on a wildly popular UC Berkeley course how to use scientists tricks of the trade to make the best decisions and solve the hardest problems in age of uncertainty and overwhelming information In our deluge of information it s getting harder and harder to distinguish the revelatory from the contradictory How do we make health decisions in the face of conflicting medical advice Does the research cited in that article even show what the authors claim How can we navigate the next Thanksgiving discussion with our in laws who follow completely different experts on the topic of climate change In Third Millennium Thinking a physicist a psychologist and a philosopher introduce readers to the tools and frameworks that scientists have developed to keep from fooling themselves to understand the world and to make decisions We can all borrow these trust building techniques to tackle problems both big and small Readers will learn How to achieve a ground level understanding of the facts of the modern world How to chart a course through a profusion of possibilities How to work together to take on the challenges we face today And much more Using provocative thought exercises jargon free language and vivid illustrations drawn from history daily life and scientists insider stories Third Millennium Thinking offers a novel approach for readers to make sense of the nonsense

The Deep Learning Revolution Terrence J. Sejnowski,2018-10-23 Explore how deep learning from Google Translate and Siri to driverless cars is changing our lives and transforming every sector of the economy An important and timely book written by a gifted scientist at the cutting edge of the AI revolution Nature The deep learning revolution has brought us driverless cars the greatly improved Google Translate fluent conversations with Siri and Alexa and enormous profits from automated trading on the New York Stock Exchange Deep learning networks can play poker better than professional poker players and defeat a world champion at Go In this book Terry Sejnowski explains how deep learning went from being an arcane academic field to a disruptive technology in the information economy Sejnowski played an important role in the founding of deep learning as one of a small group of

researchers in the 1980s who challenged the prevailing logic and symbol based version of AI The new version of AI Sejnowski and others developed which became deep learning is fueled instead by data Deep networks learn from data in the same way that babies experience the world starting with fresh eyes and gradually acquiring the skills needed to navigate novel environments Learning algorithms extract information from raw data information can be used to create knowledge knowledge underlies understanding understanding leads to wisdom Someday a driverless car will know the road better than you do and drive with more skill a deep learning network will diagnose your illness a personal cognitive assistant will augment your puny human brain It took nature many millions of years to evolve human intelligence AI is on a trajectory measured in decades Sejnowski prepares us for a deep learning future

Risk Intelligence Dylan Evans, 2015-09-29 We must make judgments all the time when we can't be certain of the risks Should we have that elective surgery Trust the advice of our financial adviser Take that new job we've been offered How worried should we be about terrorist attacks In this lively and groundbreaking book pioneering researcher Dylan Evans introduces a newly discovered kind of intelligence for assessing risks demonstrating how vital this risk intelligence is in our lives and how we can all raise our RQs in order to make better decisions every day Evans has spearheaded the study of risk intelligence devising a simple test to measure a person's RQ which when posted online sparked a storm of interest and was taken by tens of thousands of people His research has revealed that risk intelligence is quite different from IQ and that the vast majority of us have quite poor risk intelligence However he did find some people who have very high RQs So what makes the difference Introducing a wealth of fascinating research findings Evans identifies a key set of common errors in our thinking that most of us fall victim to and that undermine our risk intelligence such as ambiguity aversion overconfidence in our knowledge the fallacy of mind reading and our attraction to worst case scenarios We are also regularly led astray by the ways in which information is provided to us Citing a wide range of real life examples from the brilliant risk assessment skills of horse race handicappers to the tragically flawed evaluations of risk that caused the financial crisis Evans illustrates that sometimes our most trusted advisors including the experts and analysts at the top of their disciplines don't always give us the best advice when it comes to risk evaluation Presenting his revolutionary test that allows readers to evaluate their own RQs Evans introduces a number of simple techniques we can use to build our risk assessment powers and reports on the striking results he's seen in training people to develop their RQs Both highly engaging and truly mind changing Risk Intelligence will fascinate all of those who are interested in how we can improve our thinking in order to enhance our lives

Writing Ancient History Luke Pitcher, 2010-01-30 History is the version of past events that people have decided to agree upon said Napoleon Yet the actual writing of history especially ancient history is a practice that often prompts more discord than assent In his new textbook Luke Pitcher aims to overcome the hostility which exists between two rival camps in their study of classical historiography The first camp looks at the classical historians with an eye to what data they can provide about the ancient world The second

camp examines the ancient writers as literary texts in their own right employing the tools of literary criticism and engaging with such matters as narrative artistry Attempting to fuse these two mutually suspicious approaches Luke Pitcher s attractive introduction offers undergraduate students of classics the first comprehensive introduction to historiography in antiquity on the market It unites the nitty gritty of the historian s trade the finding and managing of data to an awareness of the importance of style form allusion and composition The book also seeks to do justice to individual classical historians and discusses such important figures as Livy Tacitus Herodotus Cicero Plutarch and Lucian A comprehensive bibliography and glossary are included Writing Ancient History at last does full justice to the mechanics of history writing in the ancient world

Experimental Methods in Biomechanics John H. Challis,2020-12-08 This is the first textbook to comprehensively cover the experimental methods used in biomechanics Designed for graduate students and researchers studying human biomechanics at the whole body level the book introduces readers to the theory behind the primary data collection methods and primary methods of data processing and analysis used in biomechanics Each individual chapter covers a different aspect of data collection or data processing presenting an overview of the topic at hand and explaining the math required for understanding the topic A series of appendices provide the specific math that is required for understanding the chapter contents Each chapter leads readers through the techniques used for data collection and processing providing sufficient theoretical background to understand both the how and why of these techniques Chapters end with a set of review questions and then a bibliography which is divided into three sections cited references specific references and useful references Provides a comprehensive and in depth presentation on methods in whole body human biomechanics First textbook to cover both collection and processing in a single volume Appendices provide the math needed for the main chapters

Mathematical Nature Walk John A. Adam,2011-09-12 How heavy is that cloud Why can you see farther in rain than in fog Why are the droplets on that spider web spaced apart so evenly If you have ever asked questions like these while outdoors and wondered how you might figure out the answers this is a book for you An entertaining and informative collection of fascinating puzzles from the natural world around us A Mathematical Nature Walk will delight anyone who loves nature or math or both John Adam presents ninety six questions about many common natural phenomena and a few uncommon ones and then shows how to answer them using mostly basic mathematics Can you weigh a pumpkin just by carefully looking at it Why can you see farther in rain than in fog What causes the variations in the colors of butterfly wings bird feathers and oil slicks And why are large haystacks prone to spontaneous combustion These are just a few of the questions you ll find inside Many of the problems are illustrated with photos and drawings and the book also has answers a glossary of terms and a list of some of the patterns found in nature About a quarter of the questions can be answered with arithmetic and many of the rest require only precalculus But regardless of math background readers will learn from the informal descriptions of the problems and gain a new appreciation of the beauty of nature and the mathematics that lies behind it Guesstimation 2.0

Lawrence Weinstein,2012-09-30 Simple and effective techniques for quickly estimating virtually anything Guesstimation 2.0 reveals the simple and effective techniques needed to estimate virtually anything quickly and illustrates them using an eclectic array of problems A stimulating follow up to Guesstimation this is the must have book for anyone preparing for a job interview in technology or finance where more and more leading businesses test applicants using estimation questions just like these The ability to guesstimate on your feet is an essential skill to have in today's world whether you're trying to distinguish between a billion dollar subsidy and a trillion dollar stimulus a megawatt wind turbine and a gigawatt nuclear

plant or parts per million and parts per billion contaminants Lawrence Weinstein begins with a concise tutorial on how to solve these kinds of order of magnitude problems and then invites readers to have a go themselves The book features dozens of problems along with helpful hints and easy to understand solutions It also includes appendixes containing useful formulas and more Guesstimation 2.0 shows how to estimate everything from how closely you can orbit a neutron star without being pulled apart by gravity to the fuel used to transport your food from the farm to the store to the total length of all toilet paper used in the United States It also enables readers to answer once and for all the most asked environmental question of our day paper or plastic

Disaster Deferred Seth Stein, 2010-10-15

A geologist takes readers inside contemporary earthquake research to offer a new account of the Midwest's legendary New Madrid fault an exceptional read Choice In the winter of 1811-12 a series of large earthquakes in the New Madrid seismic zone shook the Midwest These historic geological events are often incorrectly described as the biggest ever to hit the United States Today the federal government ranks the earthquake hazard in the Midwest as high as California's and is pressuring communities to undertake expensive preparations for disaster In Disaster Deferred geologist Seth Stein revisits these earthquakes the legends that have grown around them and the predictions of doom that have followed in their wake He details how limited scientific knowledge bureaucratic instincts and the media's love of a good story have exaggerated these

hazards Debunking the hype Stein explains how contemporary seismological techniques including the use of GPS painting a very different and much less frightening picture of the future Using new geological ideas and data he calls for a more sensible less costly policy An essential book for policy makers economists and notably educators Choice
