Global Air Transport Management and

Reshaping Business Models for the New Era Kankaew, Kannapat, 2022-05-27 The air transport industry is highly vulnerable to environmental changes as was seen when the recent COVID 19 pandemic caused most airline operations to cease. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. *Global Air Transport Management and Reshaping Business Models for the New Era* provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students, and faculty of higher education, libraries, researchers, economists, government officials, and academicians.

Human Factors in Aircraft Maintenance Demetris Yiannakides, Charalampos Sergiou, 2019-09-17 This book provides an in-depth analysis of human failure and its various forms and root causes. The analysis is developed through real aviation accidents and incidents and the deriving lessons learned. Features: Employs accumulated experience and the scientific and research point of view and recorded aviation accidents and incidents from the daily working environment. Provides lessons learned and integrates the existing regulations into the human factors discipline. Highlights the responsibility concerns and raises the accountability issues deriving from the engineers' profession by concisely distinguishing human failure types. Suggests a new approach in human factors training in order to meet current and future challenges imposed on aviation maintenance. Offers a holistic approach in human factors aircraft maintenance. *Human Factors in Aircraft Maintenance* is comprehensive, easy to read, and can be used as both a training and a reference guide for operators, regulators, auditors, researchers, academics, and aviation enthusiasts. It presents the opportunity for aircraft engineers, aviation safety officers, and psychologists to rethink their current training programs and examine the pros and cons of employing this new approach.

International Encyclopedia of Transportation, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction. This is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society, and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid 19 has had on transportation across the world at local, national, and international levels. *Encyclopedia of Transportation* Seven Volume Set containing almost 600 articles brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations, research,

economics geography and sociology in order to understand the changes taking place Emphasising the interaction between these different aspects of research it offers new solutions to modern day problems related to transportation Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines different parts of the world and different social perspectives The nine sections are structured around the following themes Transport Modes Freight Transport and Logistics Transport Safety and Security Transport Economics Traffic Management Transport Modelling and Data Management Transport Policy and Planning Transport Psychology Sustainability and Health Issues in Transportation Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications

Engineering Psychology and Cognitive Ergonomics Don Harris,Wen-Chin Li,2023-07-08 This two volume set LNCS 14017 14018 constitutes the thoroughly refereed proceedings of the 20th International Conference on Engineering Psychology and Cognitive Ergonomics EPCE 2023 held as part of HCI International 2023 which took place in Copenhagen Denmark during July 23 28 2023 A total of 1578 papers and 396 posters have been accepted for publication in the HCII 2023 proceedings from a total of 7472 submissions The papers included in the HCII EPCE volume set were organized in topical sections as follows Part I Stress fatigue and mental workload human performance and error management resilience and performance in demanding contexts Part II Human factors in aviation human factors in operations management human centered design of autonomous systems

Human Performance on the Flight Deck Don Harris,2016-12-05 Taking an integrated systems approach to dealing exclusively with the human

performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area

Human Factors for Aviation, 1996 **Learning Through Practice** Stephen Billett, 2010-06-02 Practice based learning the kind of education that comes from experiencing real work in real situations has always been a prerequisite to qualification in professions such as medicine However there is growing interest in how practice based models of learning can assist the initial preparation for and further development of skills for a wider range of occupations Rather than being seen as a tool of first time training it is now viewed as a potentially important facet of professional development and life long learning This book provides perspectives on practice based learning from a range of disciplines and fields of work The collection here draws on a wide spectrum of perspectives to illustrate as well as to critically appraise approaches to practice based learning The book s two sections first explore the conceptual foundations of learning through practice and then provide detailed examples of its implementation Long standing practice based approaches to learning have been used in many professions and trades Indeed admission to the trades and major professions e g medicine law accountancy can only be realised after completing extended periods of practice in authentic practice settings However the growing contemporary interest in using practice based learning in more extensive contexts has arisen from concerns about the direct employability of graduates and the increasing focus on occupation specific courses in both vocations and higher education It is an especially urgent issue in an era of critical skill shortages rapidly transforming work requirements and an aging workforce combined with a looming shortage of new workforce entrants We must better understand how existing models of practice based learning are enacted in order to identify how they can be applied to different kinds of employment and workplaces The contributions to this volume explore ways in which learning through practice can be

conceptualised enacted and appraised through an analysis of the traditions purposes and processes that support this learning including curriculum models and pedagogic practices **Aviation and Human Factors** Jose Sanchez-Alarcos, 2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events

Pilot Mental Health Assessment and Support Robert Bor, Carina Eriksen, Margaret Oakes, Peter Scragg, 2016-12-08 The book presents an authoritative comprehensive and practical guide to modern evidence based practice in the field of mental health assessment treatment and care It features a range of contributions from aviation related organisations including different skills and methods that can be used for the clinical assessment of pilots **The Handbook of Operator Fatigue** Gerald Matthews, P.A. Hancock, 2017-11-01 Fatigue is a recognized problem in many facets of the human enterprise It is not confined to any one area of activity but enters all situations in which humans have to perform for extended intervals of time Most problematic are the circumstances in which obligatory action is continuous and the results of failure are evidently serious or even catastrophic Therefore the modern media especially highlights fatigue related failures in industries such as transportation materials processing and healthcare It can be and indeed is no coincidence that most of the spectacular failures in process control that have resulted in the world's largest industrial accidents have occurred in the small hours of the morning when the circadian rhythm is lowest and operator fatigue itself peaks While there have been legislative efforts made at state federal and international levels to regulate working hours of employees the appropriate implementation of such legislation is still a long way off The Handbook of Operator Fatigue provides a comprehensive account of the subject to serve as the definitive reference work for researchers students and practitioners alike The volume features 30 chapters written by experts from around the world to address each important facet of fatigue including the scale of the fatigue problem Section I the nature of fatigue Section II how to assess fatigue Section III the impact of fatigue on health Section IV fatigue in the workplace Section V the neurological basis of fatigue VI sleep disorders VII and the design of countermeasures to fatigue VIII
