Vij, 2004-06-01 An electroluminescent EL material is one that emits electromagnetic EM radiation in the visible or near visible range when an electric field is applied to it EL materials have a vast array of applications in the illumination and displays industries from cheap and energy efficient lighting to large high resolution flat panel displays

Diffractional Optics of Millimetre Waves I.V. Minin, O.V. Minin, 2004-09-01 Diffractional Optics of Millimetre Waves combines those elements of diffraction theory normally associated with optics including Gaussian beams lenses and mirrors and extends them into the micro and millimetre wavelength range In this regime there are a number of applications in devices such as automobile proximity sensors satellite TV receiving antennae and non destructive testing systems Researchers working in these areas would benefit from greater understanding of the diffraction phenomena involved A translated and updated version of the authors book Diffraction Quasioptics this book will present results formerly unavailable in the general literature

Chronic Otitis Media Bernard Ars, 2008 The history of surgery for chronic suppurative otitis media CSOM is littered with stories of techniques and materials that were tried with enthusiasm but without a reasonable expectation of long term success The early papers on tympanoplasty and sadly even some still today contain numerous short term follow up reports of new procedures that looked as if they might revolutionise ear surgery By the nature of the problem the longer term results often proved to be poor and by the nature of humans the original author didn't report this As a result perhaps hundreds of patients elsewhere were subjected to surgery that was already doomed to failure even before the operations started The journals of the sixties and seventies contain many reports which most would rather forget I began my otologic career in the early sixties at the height of the otologic renaissance and so often we felt that with just one more push conductive deafness would become a thing of the past Now we know that the problems of middle ear reconstruction are multifactorial and that we are not simply looking for one single step to restore and maintain hearing and stability What we need is a greater understanding of why some procedures succeed and others fail Happily in this book Professor Ars and his team of leading clinicians and scientists begin by looking at the ranges of causes of the problems They then move on to examine the essentials needed for getting good results and they do this in the light of those things which we know at the outset cannot possibly succeed Professor Ars has gathered together an excellent group of otologists who start with the initial causes of the problems and move on to look for the essentials of success Having identified these they go on to explore how we can lay the foundations to achieve them Finally they look at the operative procedures they consider most likely to achieve success This is an excellent book which

should improve the thinking behind surgery for CSOM Alan G Kerr OBE FRCS

The Quantum Phase Operator Stephen M. Barnett, Joan Vaccaro, 2007-04-27 Describing the phase of an electromagnetic field mode or harmonic oscillator has been an obstacle since the early days of modern quantum theory The quantum phase operator was even more problematic with the invention of the maser and laser in the 1950s and 1960s This problem was not solved until the Pegg Barnett formalism was developed in the 1980

Modeling Fluctuations in Scattered Waves E. Jakeman, K. D. Ridley, 2006-06-19 Fluctuations in scattered waves limit the performance of imaging and remote sensing systems that operate on all wavelengths of the electromagnetic spectrum To better understand these fluctuations Modeling Fluctuations in Scattered Waves provides a practical guide to the phenomenology mathematics and simulation of non Gaussian noise models and d

Fast Light, Slow Light and Left-Handed Light P.W. Milonni, 2004-11-30 The propagation of light in dispersive media is a subject of fundamental as well as practical importance In recent years attention has focused in particular on how refractive index can vary with frequency in such a way that the group velocities of optical pulses can be much greater or much smaller than the speed of light in vacuum or in which the refractive index can be negative Treating these topics at an introductory to intermediate level Fast Light Slow Light and Left Handed Light focuses on the basic theory and describes the significant experimental progress made during the past decade The book pays considerable attention to the fact that superluminal group velocities are not in conflict with special relativity and to the role of quantum effects in preventing superluminal communication and violations of Einstein causality It also explores some of the basic physics at the opposite extreme of very slow group velocities as well as stopped and regenerated light including the concepts of electromagnetically induced transparency and dark state polaritons Another very active aspect of the subject discussed concerns the possibility of designing metamaterials in which the refractive index can be negative and propagating light is left handed in the sense that the phase and group velocities are in opposite directions The last two chapters are an introduction to some of the basic theory and consequences of negative refractive index with emphasis on the seminal work carried out since 2000 The possibility that perfect lenses can be made from negative index metamaterials which has been perhaps the most controversial aspect of the field is introduced and discussed in some detail

Optical Tweezers Miles J. Padgett, Justin Molloy, David McGloin, 2010-06-02 The technical development of

optical tweezers along with their application in the biological and physical sciences has progressed significantly since the demonstration of an optical trap for micron sized particles based on a single tightly focused laser beam was first reported more than twenty years ago Bringing together many landmark papers on *Diode Lasers* D. Sands,2004-10-30 The compact size reliability and low cost of diode lasers lead to applications throughout modern technology most importantly in modern optical telecommunication systems This book presents a comprehensive introduction to the principles and operation of diode lasers It begins with a review of semiconductor physics and laser fundamentals before describing the most basic homojunction laser Later chapters describe more advanced laser types and their applications including the most recently developed and exotic laser designs The author's intuitive style coupled with an extensive set of worked examples and sample problems make this an outstanding introduction to the subject High-Speed Photonic Devices Nadir Dagli,2006-09-29 With the ongoing worldwide installation of 40 Gbit/s fiber optic transmission systems there is an urgency to learn more about the photonic devices supporting this technology Focusing on the components used to generate modulate and receive optical signals *High Speed Photonic Devices* presents the state of the art enabling technologies behind h **Laser-Induced Damage of Optical Materials** Roger M. Wood,2003-08-01 The laser power handling capacities of optical systems are determined by the physical properties of their component materials At low intensity levels these factors are not important but an understanding of damage mechanisms is fundamental to good design of laser products operating at high power *Laser Induced Damage of Optical Materials* presents Lasers in the Preservation of Cultural Heritage Costas Fotakis,D. Anglos,V. Zafiropulos,Savas Georgiou,Vivi Tornari,2006-10-25 With the maturation of laser technology in diagnostic and conservation applications conservation scientists archeologists art historians researchers and advanced science oriented students now have the tools necessary for preserving the future of our past our cultural heritage Presenting recent developments in the field *Lasers in the Preservation of Cultural Heritage Principles and Applications* addresses the basic concepts of laser applications and supplies case studies of analytical structural diagnostic and laser cleaning applications The book provides a comprehensive presentation of the fundamental principles and applications of modern laser technology in the analysis of composition diagnostics of structural integrity and conservation of artworks and antiquities Beginning with an introduction to the basic techniques used in art conservation and archeology the book describes the fundamental aspects of laser matter interactions emphasizing laser diagnostics and laser processing applications The next few chapters focus on laser based spectroscopic techniques for the analysis of the composition of materials in art and archaeology including laser induced breakdown Raman and laser induced fluorescence spectroscopic techniques The book proceeds to highlight nondestructive diagnostic techniques laser processing applications laser applications for the cleaning of paintings and stone and methods for the removal of encrustations It concludes with case studies for the conservation of materials like parchment paper metal ivory and wood and includes conservation approaches for modern paintings Bridging science with art *Lasers in*
