Lockie Leonard Lesson Plans:

Beginning Teachers Michael Crowhurst, 2015-04-27 In this collection of narratives beginning teachers describe and reflect on critical incidents classes that didn't quite go to plan. These experiences are recalled in a general way and all names and locations are fictionalized. Each narrative while situated in a classroom focuses on the experience of the teacher author and sheds light on their thinking as they work through the complex event they are remembering. Beginning teachers then imagine how they might approach a similar situation in the future. While developing reflective practice techniques can support and enhance individual practice when these accounts are shared with others there is some scope for enhancing educative experiences generally. There is a long tradition of reflective practice writing in education and this small workbook aims to make a contribution to this genre. Each reflective practitioner narrative is followed with an invitation to discussion section and periodically through the workbook sideline methodologies are introduced that readers can use to support further analysis. The beginning teacher narratives are authentic, complex and alive and as a consequence they will generate lively discussion in tutorial spaces with beginning teachers. The materials are informed by various strands of poststructural and critical theory and therefore they are intended to reflect a dialogic stance rather than signpost specific directions.

Australian National Bibliography, 1996-12 *PTM.*, 1973 Ecological Restoration Singarayer Florentine, Paul Gibson-Roy, Kingsley Wayne Dixon, Linda Broadhurst, 2023-06-14 Ecological restoration although a relatively new endeavour compared to other disciplines has gained significant momentum during the last decade as accelerating global change becomes more apparent. It is now widely accepted by the scientific community that to avoid further devastating effects of climate change and biodiversity loss humanity must determinedly move more to protect and restore natural ecosystems. Many restoration efforts of the past have been ad hoc, site and situation specific and have often failed to achieve desired outcomes but over the last decade many countries are allocating increasingly significant amounts of financial investment towards restoration with the goal of achieving more systematic and predictable outcomes. Today activities related to restoring ecosystems, natural assets and biodiversity are a global focus. This book covers a wide range of topics related to ecological restoration including for grasslands, wetlands, temperate and tropical forests and arid zones. Importantly it also focuses on ecological restoration in human disturbed landscapes such as for urban areas, farmlands, mine sites and transport corridors. It highlights the necessity for evidence-based approaches that are both nuanced and complementary with prescriptions for people-based restoration that is socially inclusive and cognisant of historic and current community sentiment. Ambitious landscape and continental scale targets for ecological restoration have been set across the globe. However, without practical guidelines developed from restoration evaluations from the recent past to follow, future efforts are unlikely to be successful nor expected targets met. To that end, this book reviews and highlights a large number and variety of restoration stories from around the world. Most are presented as reader-friendly case studies that feature innovative and systematic techniques for
