Surfing the Past Olivier Nyirubugara, 2012 This books discusses one of the most frequently discussed subjects in history education during the last two decades namely how secondary school pupils use the World Wide Web for their learning activities Based on two case studies in two Dutch schools the book shows some ways in which the use of the Web has changed history education in at least three respects first the findings of the two case studies show that the Web has a huge potential to turn the history class previously described as boring and too abstract into a livelier and more attractive environment where concepts events phenomena and processes of the past almost always have textual and or audio visual representations second strong indications were observed showing that the Web fosters historical understanding not only by triggering thinking processes that take pupils beyond the shown contents but also by prompting them to evaluate sources and sample relevant fragments for their assignments third the Web has brought into history education sources that were previously excluded including those described as unconventional This

book shows among other things that convergence is underway on both the user side since pupils use both conventional and unconventional online sources and the content production side where heritage institutions are increasingly getting involved in unconventional platforms like Wikipedia. The latter emerged from the two case studies as the most popular source of historical information while the websites of heritage institutions tended to appear at the bottom of the list of references. Unlike personal sites which also scored better, heritage sites face some obstacles including the still dominant desire to preserve institutions' identity and uniqueness, conservatism which often prevents the redefinition of collection management tasks and the tax payers dilemma. For that reason, collections are not hyperlinked and therefore remain invisible and not easy to find online.

Youth Studies James Côté, 2017-09-16 The burgeoning field of youth studies encompasses multiple viewpoints presenting a confusing picture to novices and experts alike. This insightful text goes to the heart of the fundamental issues and debates that characterize this developing field, giving readers a clearer understanding of its current progress and future prospects. James Côté's lively debate focused overview of the underlying paradigms and theories in youth studies, drawn from the overlapping disciplines of sociology, psychology and cultural studies, functions both as an introduction to the area and as an exercise in critical thinking, putting its readers on the cutting edge of the field. The chapters move from identifying the key threshold meta-concepts that influence research to showing readers how to critically evaluate key debates in areas that are central to students' lives, including education, work, family, technologies, youth culture, identity and politics. *Youth Studies* is the ideal companion to youth-related degree programmes and to youth modules in sociology, social work, social policy, psychology and other related disciplines.

Cyber-risk and Youth Michael Adorjan, Rosemary Ricciardelli, 2018-12-19 Cyber risks are moving targets and societal responses to combat cyber victimization are often met by the distrust of young people. Drawing on original research, this book explores how young people define, perceive and experience cyber risks, how they respond to both the messages they are receiving from society regarding their safety online and the various strategies and practices employed by society in regulating their online access and activities. This book complements existing quantitative examinations of cyberbullying, assessing its extent and frequency, but also aims to critique and extend knowledge of how cyber risks such as cyberbullying are perceived and responded to. Following a discussion of their methodology and their experiences of conducting research with teens, the authors discuss the social network services that teens are using and what they find appealing about them, and address teens' experiences with and views towards parental and school-based surveillance. The authors then turn directly to areas of concern expressed by their participants, such as relational aggression, cyberhacking, privacy and privacy management, as well as sexting. The authors conclude by making recommendations for policy makers, educators and teens, not only by drawing from their own theoretical and sociological interpretations of their findings, but also from the responses and recommendations given by their participants about going online and tackling cyber risk. One of the first texts to explore how young people respond to attempts to regulate

online activity this book will be key reading for those involved in research and study surrounding youth crime cybercrime youth culture media and crime and victimology and will inform those interested in addressing youth safety online how to best approach what is often perceived as a sensitive and volatile social problem
