Light Scattering Reviews 4 Alexander A. Kokhanovsky, 2009-07-25. This fourth volume of Light Scattering Reviews is composed of three parts. The first part is concerned with theoretical and experimental studies of single light scattering by small nonspherical particles. Light scattering by small particles such as, for instance, droplets in the terrestrial clouds is a well understood area of physical optics. On the other hand, exact theoretical calculations of light scattering patterns for most of nonspherical and irregularly shaped particles can be performed only for the restricted values of the size parameter which is proportional to the ratio of the characteristic size of the particle to the wavelength. For the large nonspherical particles, approximations are used, e.g., ray optics. The exact theoretical techniques such as the T-matrix method cannot be used for extremely large particles such as those in ice clouds because then the size parameter in the variable $2a$ (where a is the characteristic size radius for spheres) and the associated numerical codes become unstable and produce wrong answers. Yet another problem is due to the fact that particles in many turbid media, e.g., dust clouds, cannot be characterized by a single shape. Often refractive indices also vary. Because of problems with theoretical calculations, experimental laboratory

investigations are important for the characterization and understanding of the optical properties of such types of particles
The first paper in this volume written by B Gustafson is aimed at the description of scaled analogue experiments in electromagnetic scattering

Advanced Optical Flow Cytometry Valery V.

Tuchin, 2011-03-31 A detailed look at the latest research in non invasive in vivo cytometry and its applications with particular emphasis on novel biophotonic methods disease diagnosis and monitoring of disease treatment at single cell level in stationary and flow conditions This book thus covers the spectrum ranging from fundamental interactions between light cells vascular tissue and cell labeling particles to strategies and opportunities for preclinical and clinical research General topics include light scattering by cells fast video microscopy polarization laser scanning fluorescence Raman multi photon photothermal and photoacoustic methods for cellular diagnostics and monitoring of disease treatment in living organisms

Also presented are discussions of advanced methods and techniques of classical flow cytometry

Numerical Simulations

Lutz Angermann, 2011-01-30 This book will interest researchers scientists engineers and graduate students in many disciplines who make use of mathematical modeling and computer simulation Although it represents only a small sample of the research activity on numerical simulations the book will certainly serve as a valuable tool for researchers interested in getting involved in this multidisciplinary field It will be useful to encourage further experimental and theoretical researches in the above mentioned areas of numerical simulation

Information Technology in Medical Diagnostics II Waldemar

Wójcik, Sergii Pavlov, Maksat Kalimoldayev, 2019-02-13 For many centuries mankind has tried to learn about his health Initially during the pre technological period he could only rely on his senses Then there were simple tools to help the senses The breakthrough turned out to be the discovery of X rays which gave insight into the human body Contemporary medical diagnostics are increasingly supported by information technology which for example offers a very thorough analysis of the tissue image or the pathology differentiation It also offers possibilities for very early preventive diagnosis Under the influence of information technology traditional diagnostic techniques and new ones are changing More and more often the same methods can be used for both medical and technical diagnostics In addition methodologies are developed that are inspired by the functioning of living organisms Information Technology in Medical Diagnostics II is the second volume in a series showing the latest advances in information technologies directly or indirectly applied to medical diagnostics Unlike the previous book this volume does not contain closed chapters but rather extended versions of presentations made during two conferences XLVIII International Scientific and Practical Conference Application of Lasers in Medicine and Biology Kharkov Ukraine and the International Scientific Internet conference Computer graphics and image processing Vinnitsa Ukraine both held in May 2018 Information Technology in Medical Diagnostics II links technological issues to medical and biological issues and will be valuable to academics and professionals interested in medical diagnostics and IT
