Heijdra, 2017-08-25 The study of macroeconomics can seem a daunting project The field is complex and sometimes poorly defined and there are a variety of competing approaches It is easy for the senior bachelor and starting master student to get lost in the forest of macroeconomics and the mathematics it uses extensively Foundations of Modern Macroeconomics is a guide book for the interested and ambitious student Non partisan in its approach it deals with all the major topics summarising the important approaches and providing the reader with a coherent angle on all aspects of macroeconomic thought Each chapter deals with a separate area of macroeconomics and each contains a summary section of key points and a further reading list Using nothing more than undergraduate mathematical skills it takes the student from basic IS LM style macro models to the state of the art literature on Dynamic Stochastic General Equilibrium explaining the mathematical tricks used where they are first introduced Fully updated and substantially revised this third edition of Foundations of Modern Macroeconomics now includes brand new chapters covering highly topical subjects such as dynamic programming competitive risk sharing equilibria and the New Keynesian DSGE approach

Money Demand in Europe Helmut Lütkepohl, Jürgen Wolters, 2013-04-17 In 1999 a number of member states of the European Union will adopt

a common currency This change in the monetary system requires that a European Central Bank is set up and a common monetary policy is pursued There is general agreement among those countries which are likely to join the common currency that price level stability has to be the ultimate objective of monetary policy It is an open issue however what kind of policy is best suited for that purpose The alternative strategies under discussion are a direct inflation targeting an intermediate monetary targeting or a mixture of both For these policy strategies a stable money demand relation is of central importance Therefore a workshop on Money Demand in Europe was organized at the Humboldt University in Berlin on October 10-11 1997 This research conference brought together academic and central bank economists and econometricians predominantly from Europe to discuss issues on specification estimation and in particular stability of money demand relations both in a single equation and in a systems framework In this volume revised versions of the papers presented and discussed at the workshop are collected The volume thereby gives an overview of money demand analysis in Europe on the eve of the introduction of the Euro in some European countries It contributes to the discussion on a suitable monetary policy for the new European Central Bank

Imperfect Information and Investor Heterogeneity in the Bond Market Frank Riedel, 2012-12-06 Real world investors differ in their tastes and attitudes and they do not have in general perfect information about the future prospects of the economy Most theoretical models however assume to the contrary that investors are homogeneous and perfectly informed about the market In this book an attempt is made to overcome these shortcomings In three different case studies the effect of heterogeneous time preferences heterogeneous beliefs and imperfect information about the economy's growth on the term structure of interest rates are studied The initial chapter gives an introduction to the theory of financial markets in

continuous time under imperfect information and establishes the existence of an equilibrium with complete markets

Sargent, 2018-09-11 The substantially revised fourth edition of a widely used text offering both an introduction to recursive methods and advanced material mixing tools and sample applications Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material Only practice in solving diverse problems fully conveys the advantages of the recursive approach so the book provides many applications This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models Other chapters have been extended and refined For example there is new material on heterogeneous beliefs in both complete and incomplete markets models and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models The book is suitable for first and second year graduate courses in macroeconomics Most chapters conclude with exercises many exercises and examples use Matlab or Python computer programming languages
