Modelling for Discrete Optimization Gautam M. Appa, Leonidas Pitsoulis, H. Paul Williams, 2006-08-18 The primary reason for producing this book is to demonstrate and communicate the pervasive nature of Discrete Optimisation It has applications across a very wide range of activities Many of the applications are only known to specialists Our aim is to rectify this It has long been recognized that modelling is as important if not more important a mathematical activity as designing algorithms for solving these discrete optimisation problems Nevertheless solving the resultant models is also often far from straightforward Although in recent years it has become viable to solve many large scale discrete optimisation problems some problems remain a challenge even as advances in mathematical methods hardware and software technology are constantly pushing the frontiers forward The subject brings together diverse areas of academic activity as well as diverse areas of applications To date the driving force has been Operational Research and Integer Programming as the major extension of the well developed subject of Linear Programming However the subject also brings results in Computer Science Graph Theory Logic and Combinatorics all of which are reflected in this book We have divided the chapters in this book into two parts one dealing with general methods in the modelling of discrete optimisation problems and one with specific applications The first chapter of this volume written by Paul Williams can be regarded as a basic introduction of how to model discrete optimisation problems as Mixed Integer Programmes and outlines the main methods of solving them **Computer Science - Theory**

and Applications Alexander S. Kulikov, Gerhard J. Woeginger, 2016-06-02 This book constitutes the proceedings of the 11th International Computer Science Symposium in Russia CSR 2016 held in St Petersburg Russia in June 2016 The 28 full papers presented in this volume were carefully reviewed and selected from 71 submissions In addition the book contains 4 invited lectures The scope of the proposed topics is quite broad and covers a wide range of areas such as include but are not limited to algorithms and data structures combinatorial optimization constraint solving computational complexity cryptography combinatorics in computer science formal languages and automata computational models and concepts algorithms for concurrent and distributed systems networks proof theory and applications of logic to computer science model checking automated reasoning and deductive methods *Stochastic Programming* Horand Gassmann, W. T. Ziemba, 2013 This book

shows the breadth and depth of stochastic programming applications All the papers presented here involve optimization over the scenarios that represent possible future outcomes of the uncertainty problems The applications which were presented at the 12th International Conference on Stochastic Programming held in Halifax Nova Scotia in August 2010 span the rich field of uses of these models The finance papers discuss such diverse problems as longevity risk management of individual investors personal financial planning intertemporal surplus management asset management with benchmarks dynamic portfolio management fixed income immunization and racetrack betting The production and logistics papers discuss natural gas infrastructure design farming Atlantic salmon prevention of nuclear smuggling and sawmill planning The energy papers involve electricity production planning hydroelectric reservoir operations and power generation planning for liquid natural gas plants Finally two telecommunication papers discuss mobile network design and frequency assignment problems
