ECEG 2014 Proceedings of the 14th European Conference on e-Government Alexandru Ionas,2014-12-06 *The Handbook of Historical Linguistics, Volume II* Richard D. Janda,Brian D. Joseph,Barbara S. decades ago has meanwhile matured into a new domain of research called quantum cognition. Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail. Quantum cognition has recently attracted the interest of important journals and editing houses, academic and funding institutions, popular science and media. Specifically within a quantum cognition approach, one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism. Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality, emergence, interference, superposition, entanglement, and indistinguishability. In addition, the validity of these quantum models is convincingly confirmed by new experimental tests. We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes, the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of microscopic quantum processes in the human brain. In this Research Topic, we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline. Our overview does not pretend to be either complete or exhaustive. But we aim to introduce psychologists and social scientists to this challenging new research area, encouraging them at the same time to consider its promising results. It is our opinion that if continuous progress in this domain can be realized, quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science.

Analogical classification in formal grammar Matías Guzmán Naranjo, 2019 The organization of the lexicon and especially the relations between groups of lexemes is a strongly debated topic in linguistics Some authors have insisted on the lack of any structure of the lexicon In this vein Di Sciullo Skousen 1989 Eddington 1996 This approach often called

analogical has developed highly accurate computational and non computational models that can predict the classes to which lexemes belong Like the organization of lexemes in type hierarchies analogical relations between items help speakers to make sense of intricate systems and reduce apparent complexity K pcke Zubin 1984 Despite this core commonality and despite the fact that most linguists seem to agree that analogy plays an important role in language there has been remarkably little work on bringing together these two approaches Formal grammar traditions have been very successful in capturing grammatical behaviour but in the process have downplayed the role analogy plays in linguistics Anderson 2015 In this work I aim to change this state of affairs First by providing an explicit formalization of how analogy interacts with grammar and second by showing that analogical effects and relations closely mirror the structures in the lexicon I will show that both formal grammar approaches and usage based analogical models capture mutually compatible relations in the lexicon

The City Since 9/11 Keith Wilhite, 2016-03-04 Charting the intersection of aesthetic representation and the material conditions of urban space The City Since 9 11 posits that the contemporary metropolis provides a significant context for reassessing theoretical concerns related to narrative identity home and personal precarity In the years since the September 11 attacks writers and filmmakers have explored urban spaces as contested sites shaped by the prevailing discourses of neoliberalism homeland security and the war on terror but also haunted by an absence in the landscape that registers loss and prefigures future menace In works of literature film and television the city emerges as a paradoxical space of permanence and vulnerability and a convergence point for anxieties about globalization structural inequality and apocalyptic violence Building on previous scholarship addressing trauma and the spectacle of terror the contributors also draw upon works of philosophy urban studies and postmodern geography to theorize how literary and visual representations expose the persistent conflicts that arise as cities rebuild in the shadow of past ruins Their essays advance new lines of argument that clarify art s role in contemporary debates about spatial practices gentrification cosmopolitanism memory and history nostalgia the uncanny and the abject postmodern virtuality the politics of realism and the economic and social life of cities The book offers fresh readings of familiar post 9 11 novels such as Jonathan Safran Foer s *Extremely Loud Incredibly Close* but it also considers works by Teju Cole Joseph O Neill Silver Krieger Colum McCann Ronald Sukenick Jonathan Lethem Thomas Pynchon Colson Whitehead Paul Auster William Gibson Amitav Ghosh and Katherine Boo In addition *The City Since 9 11* includes essays on the films *Children of Men* *Hugo* and the adaptation of *Extremely Loud Incredibly Close* chapters on the television series *The Bridge* *The Killing* and *The Wire* and an analysis of Michael Arad s *Reflecting Absence* and the 9 11 Memorial

Light Verb Constructions as Complex Verbs Anna Pompei, Lunella Mereu, Valentina Piunno, 2023-10-24 The notion of light verb constructions has been traditionally related to the insignificance of the verb which is described as a grammatical item only codifying TAM system and features whereas the whole predicative content is thought to be conveyed by the noun This book deals with the light verb constructions as instances of complex verbs intended as multi predication but monoclausal structures This allows to deepen the actual verb lightness the effective noun predicativity as well as their effect on the cohesion of the construction The papers in this volume reflect on the concrete contribution of noun and verb to the event and argument structure and on the relevance of semantically different noun classes for the verb selection From different theoretical approaches data of a great variety of languages are investigated such as Indo European languages both modern Germanic Slavic Romance and Iranian languages and ancient Latin and
