The State of Food and Agriculture 2022 Food and Agriculture Organization of the United Nations, 2022-11-01 Automation has been shaping world agriculture since the early twentieth century Motorized mechanization has brought significant benefits in terms of improved productivity reduced drudgery and more efficient allocation of labour but also some negative environmental impacts More recently a new generation of digital agricultural automation technologies has appeared with the potential to further enhance productivity as well as resilience while also addressing the environmental sustainability challenges driven by past mechanization The State of Food and Agriculture 2022 looks into the drivers of agricultural automation including the more recent digital technologies Based on 27 case studies the report analyses the business case for adoption of digital automation technologies in different agricultural production systems across the world It identifies several barriers preventing inclusive adoption of these technologies particularly by small scale producers Key barriers are low digital literacy and lack of an enabling infrastructure such as connectivity and access to electricity in addition to financial constraints Based on the analysis the publication suggests policies to ensure that disadvantaged groups in developing regions can benefit from agricultural automation and that automation contributes to sustainable and resilient agrifood systems

The 5G Myth William Webb, 2018 The 5G Myth explains why the vision of 5G the next generation in mobile telephony heralded as a huge advance in global connectivity is flawed and sets out a better vision for a connected future It explains why insufficient technological advances and inadequate profitability will be problems in the widespread implementation of 5G The book advocates a focus on consistent connectivity everywhere rather than fast speeds in city centers William Webb looks back at the transitions through previous generations of mobile telephony and shows what simple extrapolations of trends would predict for 5G He discusses whether the increases in speed and capacity promised by 5G are needed if the required technology is available whether a sound business case can be made for the deployment and asks why given this the industry appears so supportive of 5G He then puts forth the argument in favor of consistent connectivity of around 10Mbps everywhere as a more compelling vision and shows how it can be delivered via a mix of 4G and Wi Fi
